

"This book is about getting your MFC applications to work together and share information using OLE, ActiveX and COM.

You'll begin by finding out about COM at its base level, so that you understand what you're dealing with. Then you'll move on to discover how to program object servers and containers, how to create ActiveX controls, and how to implement Automation - all the time using the support provided by MFC to help you.

There's never been a clearer route in these technologies for the MFC user; this is the book that cuts through the terminology and tells it like it is."
