**Basic Coastal Engineering** Robert Sorensen,1997-09-30 In the 20 years since publication of the first edition of this book there have been a number of significant changes in the practice of coastal engineering This new edition has been completely rewritten to reflect these changes as well as to make other improvements to the material presented in the original text \_ Basic Coastal Engineering is an introductory text on wave mechanics and coastal processes along with the fundamentals of the practice of coastal engineering This book was written for a senior or first postgraduate course in coastal engineering It is also suitable for self study by anyone having a basic engineering or physical science background The level of coverage does not require a math or fluid mechanics background beyond that presented in a typical undergraduate civil or mechanical engineering curriculum The material presented in this text is based on the author's lecture notes from a one semester course at Virginia Polytechnic Institute Texas A M University and George Washington University and a senior elective course at Lehigh University The text contains examples to demonstrate the various analysis techniques that are presented and each chapter except the first and last has a collection of problems for the reader to solve that further demonstrate and expand upon the text material Chapter 1 briefly describes the coastal environment and introduces the relatively new field of coastal engineering *Review of the Corps of Engineers Approach to the Problem of Shoreline Erosion Control* United States. **Algorithms for Coastal Engineering** Julie L. Dean, Todd L. Walton (Jr.), 1985 This is the fourth in a series of reports providing handheld calculator algorithms for use in coastal engineering The first and second reports in this series were published as Coastal Engineering Technical Aids CETA s CETA 82 1 presents a set of six algorithms for programs useful in performing certain wave transformation and wave generation calculations with both the Texas Instruments TI 59 Algebraic Operating System AOS notation and the Hewlett Packard HP 67 Reverse Polish Notation RPN CETA 82 4 presents the same six algorithms for use on the HP 41 CV RPN The third report Miscellaneous Paper CERC 83 9 Report 3 provides calculator algorithms for use with the HP 41CV The first program computes the breaking wave forces on and moments about the base of vertical face structures using the Minikin method The second program computes the non breaking wave force and overturning moment at the base of vertical face structures using both the Miche Rundgren and Sainflou equations The last program computes the pressure distribution corresponding to the Miche Rundgren and or Sailnflou solutions The reference to these programs is the Shore Protection Manual US Army Engineer Waterways Experiment Station Coastal Engineering Research Center 1984

**Mathematical Models in Coastal Engineering** Christopher G. Koutitas, 1988 The book provides a basic methodology for the formulation and numerical solution of mathematical models in coastal engineering First the mathematical theory of waves is considered the coastal circulation due to various generating factors such as tide wind density variation and waves finally pollutant advective diffusion and sediment transport in the surf zone and wider coastal domain The book contains numerous illustrative worked examples with the corresponding computer listings in BASIC The book will enable engineering consultants researchers and postgraduate students in coastal engineering and oceanography to apply the sophisticated techniques used in major coastal engineering works to small scale design using microcomputers
