Net Guide Kelly Maloni,1995

Developing Enterprise Chatbots Boris Galitsky,2019-04-04

A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays

Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies

Today there are two popular paradigms for chatbot construction

1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data

2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat

Although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle

The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms

Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue

This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning

The foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches

Supplementary material and code is available at <https://github.com/bgalitsky>

relevance based on parse trees

Impact and implications of AI methods and tools for the future of education

Kingsley Okoye,Samira Hosseini,Kamal Kant Hiran ,Julius Nganji,2024-06-07

The congruence of technology such as AI and its use for education can help transform the different pedagogical practices and future of education

Educational organizations like The UNESCO and The World Bank are already calling for research and development oriented projects and creation mobilization of technological initiatives on how to re imagine education and operationalize the use of digital technologies for its purpose

the Digitized Education Those goals mean or include methodological approaches and wide adoption of the AI methods in fostering education in the classroom or learning environments

Also noteworthy is the fact that

digitized education is now an inevitable and integral element to achieving the global sustainable development goals SDGs particularly the SDG4 that promotes quality of education

Gamer's Web Directory Marc Saltzman, Mark Salzman, 1997
Includes thousands of links to gaming sites and secrets on playing the games CD ROM contains cheat codes and game hacks trial versions of new games and a complete HTML version of the book

Discovering Computers 2001 Gary B. Shelly, 2000
With the latest edition of this classroom success Shelly and Cashman have successfully blended coverage of cutting edge technology with core computer concepts to make learning about computers interesting and easy

Discovering Computers 2001 Concepts for a Connected World fosters online course development with its integration of the World Wide Web and enhanced end of chapter material supported by WebCT and CyberClass

Introduction to Information Systems R. Kelly Rainer, Brad Prince, 2020-06-11
