Wang, 2020-01-03 From the beginning of software time people have wondered why it isn't possible to accelerate software
projects by simply adding staff This is sometimes known as the nine women can't make a baby in one month problem The
most famous treatise declaring this to be impossible is Fred Brooks 1975 book The Mythical Man Month in which he declares
that adding more programmers to a late software project makes it later and indeed this has proven largely true over the
decades Aided by a domain driven code generator that quickly creates database and API code Parallel Agile PA achieves
significant schedule compression using parallelism as many developers as necessary can independently and concurrently
develop the scenarios from initial prototype through production code Projects can scale by elastic staffing rather than by
stretching schedules for larger development efforts Schedule compression with a large team of developers working in
parallel is analogous to hardware acceleration of compute problems using parallel CPUs PA has some similarities with and
differences from other Agile approaches Like most Agile methods PA gets to code early and uses feedback from executable
software to drive requirements and design PA uses technical prototyping as a risk mitigation strategy to help sanity check
requirements for feasibility and to evaluate different technical architectures and technologies Unlike many Agile methods PA
does not support design by refactoring and it doesn't drive designs from unit tests Instead PA uses a minimalist UML based
design approach Agile ICONIX that starts out with a domain model to facilitate communication across the development team
and partitions the system along use case boundaries which enables parallel development Parallel Agile is fully compatible
with the Incremental Commitment Spiral Model ICSM which involves concurrent effort of a systems engineering team a
development team and a test team working alongside the developers The authors have been researching and refining the PA

process for several years on multiple test projects that have involved over 200 developers The book s example project details the design of one of these test projects a crowdsourced traffic safety system *AI Expert* ,1990 **Human Capital Management in the Contemporary Workplace** Agata Sudolska,Kamil Zawadzki,2024-07-12 Nowadays organisations are confronted with the imperative to enhance their organisational sustainability This involves establishing an appropriate balance between the economic ecological and social aspects of an organisation s operations and striving to accomplish their economically viable goals that are both socially and environmentally responsible By aligning the priorities and incorporating environmental social and economic factors into their operational strategies organisations can generate value for themselves while also making a positive impact on the current and future welfare of society and the environment Noticeably the advancement of organisational sustainability relies heavily on human capital management in the workplace Today more than ever human capital is regarded as the foundation of organisations and ought to be treated as such Given the pivotal role of human capital management for ensuring the long term organisational sustainability of an organisation emphasis should be placed on redefining leadership strategies and priorities focusing on diversity and inclusion cultivating talent facilitating remote work fostering employee engagement promoting skill development for environmentally friendly practices and prioritising job satisfaction and employee well being In response to the multi faceted challenges of the third decade of the 21st century this book provides an in depth review of research avenues addressing present and future human capital development concerns in terms of enhancing organisation sustainability The main aim of the book is to indicate the direction of demand for new competences regarding workplace human capital and identify synergies between its particular aspects with reference to contemporary human capital development The monograph s objectives include presenting tools that allow the analysis and development of human capital competences pro active and pro environmental attitudes and behaviours the coexistence of workers and AI in the organisation as well as providing employee well being satisfaction and commitment Moreover the book offers recommendations for contemporary responsible organisations that carry themselves towards the new economic and social order and sustainability *Electronics* ,1987 **Insurance Review** ,1988 DATAMATION.
