The book redefines success in a fast-paced AI-driven industry. It introduces the MAP framework: Mindset, Adaptability, Purpose, to help young techies hustle intentionally without burning out. Chapters explore generational workplace dynamics, mental health challenges such as anxiety caused by social media, and the need for continuous learning. 65% of tech skills expire within three years, Gartner 2024. Real stories like Aalok's Day 17 Disaster at IBM show how embracing challenges leads to growth. The key lessons include building a skill stack over chasing titles, with 70% of tech jobs now requiring cross-functional skills. LinkedIn 2024. The book also introduces simple methods focusing on mindset, intentionality, navigation, and discipline, and Aalok's Single Secret Technique (SST) for productivity, such as one-minute breath resets. It encourages finding purpose, whether coding for a cause or freelancing, and stresses adaptability in a rapidly evolving field. Ultimately, *Art of Digital Hustle* empowers the next generation to craft unique, fulfilling IT careers by staying true to themselves and leveraging their digital-native strengths. **Bank 4.0** Brett King, 2018-12-28 Winner of best book by a foreign author 2019 at the Business Book of the Year Award organised by PwC Russia. How To Take Good Notes Angelos Georgakis, 2017-06-25

Why would I need a book on how to take notes Notes are just notes FALSE Scientists have found that note taking can be as mentally demanding as playing chess can be for an expert While you take notes you listen carefully to the lecturer you process the new material you organize it in your working memory and you finally write down what you think is most important All this happens while someone is talking at an average speed of three words per second and someone is writing down at an average speed of one third of a word per second It doesn't sound easy now does it Notes are an important tool for learning We don't take notes just to record a few facts so we can review them later Learning happens as we take notes Taking notes the right way leads to good study practices better performance on exams and long term retention of information Note taking comes naturally FALSE Note taking is not obvious or intuitive Research has shown that students fail to capture 40% of the main points in a typical lecture First year students capture only 11% In some studies even the best note takers seem to record less than 75% of the important information People think they take good notes until they're told they don't Few of us have consciously thought about how we take notes let alone how to improve the quality of them We often reproduce the lecturer's phrases verbatim We don't save time by systematic use of abbreviations We fail to become a good psychologist of our lecturer We fail to pick up his enthusiasm We fail to interpret the tone of his voice We fail to read his body language And the result is that we fail to take good notes Anyway no one taught me how to take notes in school or in college TRUE Educators believe that students are able to assess the quality of their notes and follow good practices However studies have shown the exact opposite The fact that there isn't a course in college dedicated to the art of taking notes or learning in general makes students believe that this is a natural skill that they can perfect with practice over the course of their studies At the end of the day everyone has their own way to take notes TRUE In this book you may be surprised to learn that I don't make any references to different types of note taking systems like those that other books do The reason is that it's the practices behind the note taking that matter most For example you should not copy the lecturer's phrases word for word but generate the main points in your own words And you should leave space on your notes for adding comments and testing yourself later I encourage students to use the Cornell note taking system because it utilizes most of the principles of
