international academic libraries Natural Learning for a Connected World Renate Nummela Caine, 2011-04-08 Why do video games fascinate kids so much that they will spend hours pursuing a difficult skill Why don't they apply this kind of intensity to their school work In their most penetrating and important work in years these two leaders in the field of brain based education build a bridge to the future of education with a dynamic model of teaching that works for all grade levels and in all cultural and ethnic groups The authors education model the Guided Experience Approach is based on the way that biologists see learning as a totally natural continuous interaction between perception and action Natural Learning for a Connected World provides a practical step by step description and successful examples from practice of this perception action cycle so that we can finally provide the learning environments essential for our children to thrive in the knowledge age

Clearinghouse Review ,2007 Teaching and Learning at a Distance Michael Simonson, Susan M. Zvacek, Sharon Smaldino, 2019-07-01 Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in service teachers and for training programs that discuss teaching distant learners or managing distance education systems This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education In this text we take the following themes The first theme is the definition of distance education Before we started writing the first edition of Teaching and Learning at a Distance we carefully reviewed the literature to determine the definition that would be at the foundation of our writing This definition is based on the work of Desmond Keegan but is unique to this book This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica The second theme of the book was the importance of research to the development of the contents of the book The best practices presented in Teaching and Learning at a Distance are validated by scientific evidence Certainly there are rules of thumb but we have always attempted to only include recommendations that can be supported by research The third theme of Teaching and Learning at a Distance is derived from Richard Clark's famous quote published in the Review of Educational Research that states that media are mere vehicles that do not directly influence achievement Clark's controversial work is discussed in the book but is also fundamental to the book's advocacy for distance education in other words we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn Distance delivered instruction is not a magical approach that makes learners achieve more The fourth theme of the book is equivalency theory Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive that it should cover as much of the various ways

instruction is made available to distant learners as is possible It should be a single source of information about the field
