Corporate Culture as a Formula for Company Success in the Digital Economy Ashot Khachaturyan, 2025-02-21 Corporate culture plays a key role in the success of any organization influencing not only the internal atmosphere but also the external perception of the company. It forms the basis on which relations between employees and management are built, determines the management style and approach to solving work tasks. The importance of creating and maintaining a healthy corporate culture cannot be overestimated as it directly affects employee motivation, labor productivity and the overall success of the company. Corporate culture is always a priori unique for each company. This model of optimal interaction between all employees can take years to build; it all depends on the interest of the management. Its main task is to create a comfortable environment for result orientation. A close knit team of like minded people united by a common corporate culture is able to show true professionalism and work miracles to achieve their goals. In the digital economy there are fundamentally new requirements for corporate culture institutions. The digital economy is not only a large scale technological breakthrough but also the corresponding creation of a new culture values and behavioral norms. The target model of digital human capital competencies assumes the presence of cognitive skills, self development, organization management skills, achievement of results, solving non standard tasks, adaptability, social and behavioral skills, communication, interpersonal skills, intercultural interaction and digital skills, systems building, information management. The digitalization of the economy requires radical changes in both the personality and skills of the employee. The situation is aggravated by the fact that the new generation is constantly faced with emerging and disappearing professions and technological innovations shorten the life span of any profession. The need to participate in the global digital economy requires training not only programmers and engineers but also fundamentally new types of specialists. At the same time the use of digital technologies will lead to a reduction in employment in many professions and in the future even to their complete disappearance.

Reinventing Work Martin Reeves, Deborah Lovich, 2024-10-21 Organizations often declare that their biggest asset is their people. As such business leaders make constant efforts to hire the best talent and to get the best out of their workers. But a confluence of forces is reshaping all aspects of talent management. A war for talent rages and will be exacerbated in the long term by demographic aging. The half life of skills is decreasing as AI powers more parts of business workflows. Flexible and hybrid work models are becoming commonplace and management methods focused on measurement and efficiency are not sufficient for engaging a purpose seeking generation. In these turbulent times CEOs and their entire teams not just HR need to rethink how they can create a people advantage going beyond traditional approaches to organization performance management and compensation. This book a collection of recent essays written by researchers at the BCG Henderson Institute Boston Consulting Group's think tank aims to help leaders to reinvent work by providing a forward looking perspective on all aspects of talent management. Across five chapters the book discusses How to attract the talent of the future How to shape the workforce in

an evolving context How to embrace new models of work How to build the workplace of the future How to establish new models of leadership and culture By providing a combination of new ideas real world examples and concrete recommendations Reinventing Work serves as a guide for leaders to effectively navigate the changing nature of work
