[Knowledge Co-Construction in Online Learning](#) Charlotte Nirmalani Gunawardena, Nick V. Flor, Damien M. Sánchez, 2025-04-09

Knowledge Co-Construction in Online Learning is a comprehensive foundational resource that explores the study of social construction of knowledge through platforms, social dynamics and other aspects of today's technology-enhanced education. The interactive spaces from formal computer-supported collaborative learning settings to informal social media integrative environments that comprise asynchronous online learning offer a rich source of data for analyzing teaching and learning. How then can researchers and designers in educational technology, instructional design, the learning sciences and beyond most effectively analyze the content and data generated by these complex co-creations of knowledge? Grounded in sociocultural and social constructivist theories of learning and driven by the globally renowned Interaction Analysis Model, this book applies statistical and computational methods to study the group interactions and social networks that yield newly constructed knowledge during virtual learning experiences. Its unique Social Learning Analytic Methods enhance the analysis of social dynamics that support knowledge construction, so often missing from mainstream learning analytics. Holistic and cyclical in its approach to online learning experiences, this essential volume, written for novice and experienced researchers, transcends the field's research paradigm conflicts, blends qualitative and quantitative approaches with new digital media tools and exemplifies how research questions and designs can incorporate and automate evolving forms of inquiry.

*Practices, Education and Technology in Audiovisual Translation* Alejandro Bolaños García-Escribano, 2024-08-30

This book explores the intersections of education and technology in audiovisual translation, unpacking the evolution of AVT ecosystems and looking ahead to future directions for the role of technology in the translation industry and higher education. The volume begins by outlining a holistic account of audiovisual translation scholarship, which includes work on subtitling and dubbing but which has grown to encompass a wider range of practices in light of new technologies. Before looking at the current landscape of translator education, including greater interest in distance education and AVT-centered curriculum design, these foundations set the stage for an examination of technological inroads which have permeated AVT practice, including the rise of cloud-based technologies and their use by major media companies. Bolaños draws parallels between these developments to demonstrate the ways in which new tools can

help the ever evolving needs of both the translation industry and higher education and in turn foster industry academia collaboration and the growth of new technologies through investment at the pedagogical level This book will be of interest to students scholars and practitioners in translation studies particularly those working in audiovisual translation translation technologies and translator training The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
