R. Venugopal,K.G. Srinivasa,L. M. Patnaik,2009-03-11 The authors have consolidated their research work in this volume titled Soft Computing for Data Mining Applications The monograph gives an insight into the research in the elds of Data Mining in combination with Soft Computing methodologies In these days the data continues to grow ponentially Much of the data is implicitly or explicitly imprecise Database discovery seeks to discover noteworthy unrecognized associations between the data items in the existing database The potential of discovery comes from the realization that alternate contexts may reveal additional valuable information The rate at which the data is storedis growing at a phenomenal rate Asaresult traditionaladhocmixturesofstatisticaltechniquesanddata managementtools are no longer adequate for analyzing this vast collection of data Severaldomainswherelargevolumesofdataarestoredincentralizedor distributeddatabasesincludesapplicationslikeinelectroniccommerce bio formatics computer security Web intelligence intelligent learning database systems nance marketing healthcare telecommunications andother elds E cient tools and algorithms for knowledge discovery in large data sets have been devised during the recent years These methods exploit the ca bility of computers to search huge amounts of data in a fast and e ective manner However the data to be analyzed is imprecise and a icted with certainty In the case of heterogeneous data sources such as text and video the data might moreover be ambiguous and partly con icting Besides p terns and relationships of interest are usually approximate Thus in order to make the information mining process more robust it requires tolerance toward imprecision uncertainty and exceptions   *Surveillance Technologies and Early Warning Systems: Data Mining Applications for Risk Detection* Koyuncugil, Ali Serhan,Ozgulbas, Nermin,2010-09-30 Surveillance Technologies and Early Warning Systems Data Mining Applications for Risk Detection has never been more important as the research this book presents an alternative to conventional surveillance and risk assessment This book is a multidisciplinary excursion comprised of data mining early warning systems information technologies and risk management and explores the intersection of these components in problematic domains It offers the ability to apply the most modern techniques to age old problems allowing for increased effectiveness in the response to future eminent and present risk   *Developments and Advances in Defense and Security*
