*Building a God* Christopher DiCarlo, 2025-01-21 Renowned ethicist provides

essential guide to successfully navigating the future AI landscape In Building a God Christopher DiCarlo explores the profound implications of artificial intelligence surpassing human intelligence a destiny that seems not just possible but inevitable At this critical crossroad in our evolutionary history DiCarlo a renowned ethicist in AI delves into the ethical mazes and technological quandaries of our future interactions with superior AI entities From healthcare enhancements to the risks of digital manipulation this book scrutinizes AI s dual potential to elevate or devastate humanity DiCarlo advocates for robust global governance of AI proposing visionary policies to safeguard our society AI will positively impact our lives in myriad ways from healthcare to education manufacturing to sustainability AI powered tools will improve productivity and add ease to the most massive global industries and to our own personal daily routines alike But we have already witnessed the tip of the iceberg when it comes to the risks of this new technology AI algorithms can manipulate human behavior spread disinformation shape public opinion and impact democratic processes Sophisticated technologies such as GPT 4 Dall E 2 and video Deepfakes allow users to create distort and alter information Perhaps more troubling is the foundational lack of transparency in both the utilization and design of AI models What ethical precepts should be determined for AI and by whom And what will happen if rogue abusers decide not to comply with such ethical guidelines How should we enforce these precepts Should the UN develop a Charter or Accord which all member states agree to and sign off on Should governments develop a form of international regulative body similar to the International Atomic Energy Agency IAEA which regulates not only the use of nuclear energy but nuclear weaponry as well In this incisive and cogent meditation on the future of AI DiCarlo argues for the ethical governance of AI by identifying the key components obstacles and points of progress gained so far by the global community and by putting forth thoughtful and measured policies to regulate this dangerous technology
