Accessible Technology and the Developing World Michael Ashley Stein, Jonathan Lazar, 2021-10-13 When digital content and technologies are designed in a way that is inaccessible for persons with disabilities they are locked out of commerce education employment and access to government information In developing areas of the world as new technical infrastructures are being built it is especially important to ensure that accessibility is a key design goal Unfortunately nearly all research on Information and Communication Technology ICT accessibility and innovation for persons with disabilities whether from the legal technical or development fields has focused on developed countries with very little being written about developing world initiatives Accessible Technology and the Developing World aims to change this by bringing increased attention to ICT accessibility in developing areas This book brings together a unique combination of contributors with diverse disciplinary backgrounds including authors from well known non governmental organizations significant United Nations entities and universities in both the developing and developed world Together they present a unique and much needed review of this critical and growing area of work and primarily address three core themes the lack of attention given to innovations taking place in the developing world the need to ensure that infrastructures in the Global South do not present barriers to people with disabilities and the need to exercise caution when applying techniques from the Global North to the Global South that won't transfer effectively This book will be of use to researchers in the fields of civil rights development studies disability rights disability studies human computer interaction and accessibility human rights international law political science and universal design

**Unsettled Impacts of Integrating Automated Electric Vehicles into a Mobility-as-a-Service Ecosystem and Effects on Traditional Transportation and Ownership** Joachim Taiberg, Raivo Sell, 2019-12-20 The current business model of the automotive industry is based on individual car ownership yet new ridesharing companies such as Uber and Lyft are well capitalized to invest in large commercially operated on demand mobility service vehicle fleets Car manufacturers like Tesla want to incorporate personal car owners into part time fleet operation by utilizing the company's fleet service These robotaxi fleets can be operated profitably when the technology works in a reliable manner and regulators allow driverless operation Although Mobility as a Service MaaS models of private and commercial vehicle fleets can complement public transportation models they may contribute to lower public transportation ridership and thus higher subsidies per ride This can lead to inefficiencies in the utilization of existing public transportation infrastructure MaaS platforms can also cause a reduced reliance on parking infrastructure e.g. street parking lanes and parking garages which can contribute to an improvement in overall traffic flow and a reduction in capital investment for commercial and residential real estate development Urban planning can be better centered around the true mobility needs of the citizens without sacrificing valuable space for vehicles that are inactive most of the time A key challenge is the transition phase where traditional forms of car ownership and transportation coexist with new forms of mobility services before true

MaaS platforms are fully optimized Another fundamental issue is determining the true cost of car ownership and establishing ideal cost structures for on demand mobility services in order to replace the need of owning a car This needs to occur without compromising subsidized public transportation which provides affordable transportation for low income groups NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2019004> *Network World* ,1996-01-15 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce **Business Recovery and Continuity in a Mega Disaster** Ravi Das,2022-04-20 The COVID 19 pandemic has had so many unprecedented consequences The great global shift from office work to remote work is one such consequence with which many information security professionals are struggling Office workers have been hastily given equipment that has not been properly secured or must use personal devices to perform office work The proliferation of videoconferencing has brought about new types of cyber attacks When the pandemic struck many organizations found they had no or old and unworkable business continuity and disaster recovery plans Business Recovery and Continuity in a Mega Disaster Cybersecurity Lessons Learned from the COVID 19 Pandemic reviews the COVID 19 pandemic and related information security issues It then develops a series of lessons learned from this reviews and explains how organizations can prepare for the next global mega disaster The following presents some of the key lessons learned The lack of vetting for third party suppliers and vendors The lack of controls surrounding data privacy especially as it relates to the personal identifiable information PPI data sets The intermingling of home and corporate networks The lack of a secure remote workforce The emergence of supply chain attacks e g Solar Winds To address the issues raised in these lessons learned CISOs and their security teams must have tools and methodologies in place to address the following The need for incident response disaster recovery and business continuity plans The need for effective penetration testing The importance of threat hunting The need for endpoint security The need to use the SOAR model The importance of a zero trust framework This book provides practical coverage of these topics to prepare information security professionals for any type of future disaster The COVID 19 pandemic has changed the entire world to unprecedented and previously unimaginable levels Many businesses especially in the United States were completely caught off guard and they had no concrete plans put into place from a cybersecurity standpoint for how to deal with this mega disaster This how to book fully prepares CIOs CISOs and their
