石川清(石川清)著,1967 *Introduction to Game Theory* Peter Morris,2012-12-06 The mathematical theory of games has as its purpose the analysis of a wide range of competitive situations These include most of the recreations which people usually call games such as chess poker bridge backgammon baseball and so forth but also contests between companies military forces and nations For the purposes of developing the theory all these competitive situations are called games The analysis of games has two goals First there is the descriptive goal of understanding why the parties players in competitive situations behave as they do The second is the more practical goal of being able to advise the players of the game as to the best way to play The first goal is especially relevant when the game is on a large scale has many players and has complicated rules The economy and international politics are good examples In the ideal the pursuit of the second goal would allow us to describe to each player a strategy which guarantees that he or she does as well as possible As we shall see this goal is too ambitious In many games the phrase as well as possible is hard to define In other games it can be defined and there is a clear cut solution that is best way of playing **Game Analysis** John M.
