Risk, Reliability and Safety: Innovating Theory and Practice Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25
The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence, and other sectors, the management of risk during design, manufacture, operation, and decommissioning is vital. Methods and models to support risk-informed decision making are well established but are continually challenged by technology innovations, increasing interdependencies, and changes in societal expectations. *Risk, Reliability and Safety* contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow, Scotland, 25-29 September 2016. Authors include scientists, academics, practitioners, regulators, and other key individuals with expertise and experience relevant to specific areas. Papers include domain-specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges, and exposition of concepts, methods, and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability, modelling, maintenance, optimisation, uncertainty analysis, resilience, assessment, risk, and crisis management.
