In recent history, especially in the last 25 years, there has been an explosion of terms and methods that automate and improve decision making and operations. One term, analytics, is an overarching description of a compilation of methodologies. But AI, artificial intelligence, statistics, decision science, and optimization, which have been around for decades, have resurged. Also, things like business intelligence, online analytical processing (OLAP), and many, many more have been born or reborn. How is someone to make sense of all this methodology and terminology? This book, the first in a series of three, provides a look at the foundations of artificial intelligence and analytics and why readers need an unbiased understanding of the subject. The authors include the basics, such as algorithms, mental concepts, models, and paradigms, in addition to the benefits of machine learning. The book also includes a chapter on data and the various forms of data. The authors wrap up this book with a look at the next frontiers, such as applications and designing your environment for success, which segue into the topics of the next two books in the series. **The New Era of Global Services** Javier Peña Capobianco, 2023-10-11 The New Era of Global Services is the
