, *How to Start Your Own Cybersecurity Consulting Business* Ravi

Das,2022-08-04 The burnout rate of a Chief Information Security Officer CISO is pegged at about 16 months In other words that is what the average tenure of a CISO is at a business At the end of their stay many CISOs look for totally different avenues of work or they try something else namely starting their own Cybersecurity Consulting business Although a CISO might have the skill and knowledge set to go it alone it takes careful planning to launch a successful Cyber Consulting business This ranges all the way from developing a business plan to choosing the specific area in Cybersecurity that they want to serve How to Start Your Own Cybersecurity Consulting Business First Hand Lessons from a Burned Out Ex CISO is written by an author who has real world experience in launching a Cyber Consulting company It is all encompassing with coverage spanning from selecting which legal formation is most suitable to which segment of the Cybersecurity industry should be targeted The book is geared specifically towards the CISO that is on the verge of a total burnout or career change It explains how CISOs can market their experience and services to win and retain key customers It includes a chapter on how certification can give a Cybersecurity consultant a competitive edge and covers the five top certifications in information security CISSP CompTIA Security CompTIA CySA CSSP and CISM The book s author has been in the IT world for more than 20 years and has worked for numerous companies in corporate America He has experienced CISO burnout He has also started two successful Cybersecurity companies This book offers his own unique perspective based on his hard earned lessons learned and shows how to apply them in creating a successful venture It also covers the pitfalls of starting a consultancy how to avoid them and how to bounce back from any that prove unavoidable This is the book for burned out former CISOs to rejuvenate themselves and their careers by launching their own consultancies **StarBriefs Plus** Andre Heck,2004-04-30 With about 200 000 entries StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations acronyms contractions and symbols within astronomy related space sciences and other related fields As such this invaluable reference source and its companion volume StarGuides Plus should be on the reference shelf of every library organization or individual with any interest in these areas Besides astronomy and associated space sciences related fields such as aeronautics aeronomy astronautics atmospheric sciences chemistry communications computer sciences data processing education electronics engineering energetics environment geodesy geophysics information handling management mathematics meteorology optics physics remote sensing and so on are also covered when justified Terms in common use and or of general interest have also been included where appropriate **American Machinist & Automated Manufacturing** ,1949 The Compu-mark Directory of U.S. Trademarks ,1990 **Unsettled Impacts of Integrating Automated Electric Vehicles into a Mobility-as-a-Service Ecosystem and Effects on Traditional Transportation and Ownership** Joachim Taiber,Raivo Sell,2019-12-20 The current business model of the automotive industry is based on individual car ownership yet new ridesharing companies such as Uber and Lyft are well capitalized to invest in large commercially operated on demand mobility service vehicle fleets Car manufacturers like Tesla want to incorporate personal

car owners into part time fleet operation by utilizing the company's fleet service. These robotaxi fleets can be operated profitably when the technology works in a reliable manner and regulators allow driverless operation. Although Mobility as a Service (MaaS) models of private and commercial vehicle fleets can complement public transportation models, they may contribute to lower public transportation ridership and thus higher subsidies per ride. This can lead to inefficiencies in the utilization of existing public transportation infrastructure. MaaS platforms can also cause a reduced reliance on parking infrastructure, e.g., street parking lanes and parking garages, which can contribute to an improvement in overall traffic flow and a reduction in capital investment for commercial and residential real estate development. Urban planning can be better centered around the true mobility needs of the citizens without sacrificing valuable space for vehicles that are inactive most of the time. A key challenge is the transition phase where traditional forms of car ownership and transportation coexist with new forms of mobility services before true MaaS platforms are fully optimized. Another fundamental issue is determining the true cost of car ownership and establishing ideal cost structures for on-demand mobility services in order to replace the need of owning a car. This needs to occur without compromising subsidized public transportation, which provides affordable transportation for low-income groups.

Business Recovery and Continuity in a Mega Disaster Ravi Das, 2022-04-20. The COVID-19 pandemic has had so many unprecedented consequences. The great global shift from office work to remote work is one such consequence with which many information security professionals are struggling. Office workers have been hastily given equipment that has not been properly secured or must use personal devices to perform office work. The proliferation of videoconferencing has brought about new types of cyber attacks. When the pandemic struck, many organizations found they had no or old and unworkable business continuity and disaster recovery plans. *Business Recovery and Continuity in a Mega Disaster: Cybersecurity Lessons Learned from the COVID-19 Pandemic* reviews the COVID-19 pandemic and related information security issues. It then develops a series of lessons learned from this review and explains how organizations can prepare for the next global mega disaster. The following presents some of the key lessons learned: The lack of vetting for third-party suppliers and vendors; The lack of controls surrounding data privacy, especially as it relates to the personally identifiable information (PII) data sets; The intermingling of home and corporate networks; The lack of a secure remote workforce; The emergence of supply chain attacks, e.g., Solar Winds. To address the issues raised in these lessons learned, CISOs and their security teams must have tools and methodologies in place to address the following: The need for incident response, disaster recovery, and business continuity plans; The need for effective penetration testing; The

importance of threat hunting The need for endpoint security The need to use the SOAR model The importance of a zero trust framework This book provides practical coverage of these topics to prepare information security professionals for any type of future disaster The COVID 19 pandemic has changed the entire world to unprecedented and previously unimaginable levels Many businesses especially in the United States were completely caught off guard and they had no concrete plans put into place from a cybersecurity standpoint for how to deal with this mega disaster This how to book fully prepares CIOs CISOs and their teams for the next disaster whether natural or manmade with the various lessons that have been learned thus far from the COVID 19 pandemic
