How to Enhance Learning Efficiency When Online Learning is Popular and Indispensable: Theory, Research

and Practice Rong Lian, Chang Liu, Juzhe Xi, 2024-07-17 Online learning has become more and more common globally whether for comfort adapting to work hours or just having the freedom to study from anywhere. And now under the coronavirus pandemic as people are having to stay at home it has become more important than ever. Although the popularity of wireless network and portable smart device makes it possible for people to acquire and learn knowledge anytime and anywhere it does not necessarily mean an increased learning performance. Relevant research in cognitive science has revealed possible limitations in online learning. For example, the knowledge acquired through online learning tends to be fragmented and lacks guidance for integrated thinking among different subjects which makes it difficult for learners to form a systematic knowledge structure. Learners may experience cognitive overload, metacognitive illusion, and low learning efficiency in self-regulated learning. It follows that in the post COVID-19 era online learning puts forward new requirements and challenges to the contemporary students not only to their learning strategies but positive character traits in learning. Most of the current learning theories were developed in the early 20th century and may not fit in well with the current situation then possibly leading to inefficient learning and increased learning burden. Therefore it is necessary and important to reexplore the influencing factors and mechanisms that affect the learning efficiency of students at all levels nowadays based on which we could construct a theoretical model of efficient learning model. **Automating Software Defect**

Detection Through Machine Learning and LLMs Gardiner, Bryan, Singh, Pancham, Upadhyay, Prashant, Malhotra, Meetu, Sharma, Rahul, 2025-10-02 As software systems grow in complexity and scale ensuring their reliability and quality becomes challenging. Traditional methods of defect detection are time consuming, prone to errors, and inadequate for identifying issues. To address these limitations the integration of machine learning (ML) techniques and large language models (LLMs) emerges as a transformative approach in automating software defect detection. ML algorithms can learn from historical bug data to predict vulnerabilities while LLMs can detect anomalies with high accuracy. This convergence holds the potential to improve automation software engineering and defect detection while introducing new challenges in interpretability, data bias, and model reliability that require further exploration. **Automating Software Defect Detection Through Machine Learning and LLMs** explores how cutting edge technologies like machine learning (ML) and large language models (LLMs) transform software detection. It examines how these technologies enhance accuracy, scalability, and efficiency in identifying and mitigating software defects. This book covers topics such as algorithms, fraud detection, and software engineering and is a useful resource for engineers, security professionals, academicians, researchers, and computer scientists. *Global*
