This approach addresses environmental concerns while empowering decision makers to make impactful changes ensuring a healthier, more resilient future for generations to come. *Building a Green Future Through Essential Decision-Making Competencies* explores the key decision-making skills required to address complex environmental challenges focusing on strategies like systems thinking, risk assessment, and stakeholder collaboration. It examines how these competencies can be applied across various sectors to promote sustainable practices, mitigate environmental impact, and guide the transition toward a more eco-conscious society. Essential Jamie K McCallum, 2022-11-15 How essential workers fight for better jobs during the pandemic revolutionized US labor politics. Throughout the coronavirus pandemic, essential workers lashed out against low wages, long hours, and safety risks, attracting a level of support unseen in decades. This explosion of labor unrest seemed sudden to many. But *Essential* reveals that American workers had simmered in discontent long before their anger boiled over. Decades of austerity, sociologist Jamie K McCallum shows, have left frontline workers vulnerable to employer abuse, lacking government protections and increasingly furious. Through firsthand research conducted as the pandemic unfolded, McCallum traces the evolution of workers' militancy, showing how their struggles for safer workplaces, better pay, and health care, and the right to unionize have benefitted all Americans and spurred a radical new phase of the labor movement. This is essential reading for understanding the past, present, and future of the working class.
