Aerodynamic Drag Mechanisms of Bluff Bodies and Road Vehicles Gino Sovran, 2012-12-06 These Proceedings contain the papers and oral discussions presented at the Symposium on AERODYNAMIC DRAG MECHANISMS of Bluff Bodies and Road Vehides held at the General Motors Research Laboratories in Warren Michigan on September 27 and 28 1976 This international invitational Symposium was the twentieth in an annual series each one having been in a different technical discipline The Symposia provide a forum for areas of science and technology that are of timely interest to the Research Laboratories as well as the technical community at large and in which personnel of the Laboratories are actively involved The Symposia furnish an opportunity for the exchange of ideas and current knowledge between participating research specialists from educational industrial arid governmental institutions and serve to stimulate future research activity The present world wide energy situation makes it highly desirable to reduce the force required to move road vehicles through the atmosphere A significant amount of the total energy consumed for transportation is expended in overcoming the aerodynamic resistance to motion of these vehicles Reductions in this aerodynamic drag can therefore have a large impact on ground transportation energy requirements Although aerodynamic development work on road vehides has been performed for many years it has not been widely reported or accompanied by much basic research **Modifying the Aerodynamics** of Your Road Car Julian Edgar, Richard H. Barnard, 2019-01-08 Modifying the Aerodynamics of Your Road Car is a unique handbook that assumes no starting knowledge of vehicle aerodynamics It begins with simple ideas and finishes with sophisticated and effective aerodynamic modifications that work Three major chapters cover on road testing techniques that give you all the information you need to decide what modifications you should make and after you ve made them how well they work Low cost techniques allow you to visualize the patterns of airflow over your car so that you can actually see the problem areas that need improvement Uniquely you re also shown how to measure aerodynamic pressures so you can determine which body surfaces are creating lift drag and downforce Want to work out where a wing should be placed On road testing to find that out is covered as well The book also shows you how to measure downforce to see if that wing is actually working If you wish to reduce drag more than ten different areas are covered Reducing frontal area lowering cooling system drag optimizing vehicle ride height and rake reducing the strength of the wake achieving clean airflow separation and

optimizing wheel designs are all covered using the latest research findings And if you re a performance driver there s a major chapter devoted to reducing lift and improving stability This chapter includes the design and development of undertrays and diffusers wings and spoilers The example car developed measurable downforce when fitted with an undertray and rear diffuser something that transformed its on road handling The author has been writing about the aerodynamics of road cars for more than 25 years He is also an experienced and proficient car modifier who has performed numerous aerodynamic modifications and upgrades to his own cars The book s technical consultant RH Barnard is an acknowledged world leading automotive aerodynamicist If you want a practical hands on guide that demystifies and explains car aerodynamics and shows you how to make effective aerodynamic modifications to your car this book is for you The Aerodynamics of Road **Vehicles** R. A. C. Fosberry, Z. Holubecki, 1958 Vehicle Aerodynamics Terminology Road Vehicle Aerodynamics Forum Committee, 2010 This terminology is intended to provide a common nomenclature for use in publishing road vehicle aerodynamics data and reports This document has been revised to correct numerous errors and omissions in the previous 1994 revision That revision whose sole purpose was to place it into the new SAE Technical Standards Board format was the only revision to the original 1987 issue The current 2010 revision has also been used as an opportunity to update applicable references delete those that are no longer readily available improve the organization of the document and modify the directional sense of the axes system as indicated below The following is the rationale for selection of specific terminologies conventions and definitions Axes System The SAE Road Vehicle Aerodynamics Committee agreed to modify the axes system in the original SAE J1594 issued in 1987 to have x positive rearward and z positive upward to correspond with the positive directions of drag and lift respectively This change does not affect the positive sense of the aerodynamic forces and moments as defined in the previous version of SAE J1594 only their directional sense specifically for drag lift yawing moment and rolling moment relative to the signs of the x and z axes in the new axes system Resolving Center Center of gravity c q and body geometry defined resolving centers used in vehicle dynamics Reference 2 1 1 1 and aeronautics respectively are not satisfactory for road vehicle aerodynamics applications A large portion of automotive aerodynamics development testing is performed before the vehicle c q is known The c q location can also vary significantly with vehicle option content and loading Relating the axis center to the body geometry is also problematic when major body geometry changes are explored during wind tunnel tests These situations are avoided by placing the resolving center at ground level positioned at mid wheelbase and mid track An added advantage of this location is the direct translation of aerodynamic loading to tire contact patch ground reactions Forces and Moments The primary terminology for aerodynamic force and moment components drag lift side force pitching moment yawing moment and rolling moment were adopted from aeronautical usage The symbols for drag and lift D L were also taken from aeronautics To maintain consistency with the symbols for drag and lift and to provide a mnemonic aid the other component symbols S PM YM and RM were based on terminology Attitude Angles Vehicle attitude

angle definitions and symbols also correspond to existing aerodynamics terminology as used for aircraft development Force and Moment Coefficients Aerodynamic coefficient definitions were chosen consistent with aeronautical terminology with one exception Unlike typical aerodynamics convention the wheelbase is used to compute moment coefficients Although it makes more aerodynamic sense to use a body length dimension this is more likely to change during wind tunnel development than wheelbase Using wheelbase WB provides an additional advantage with the chosen axes system in simplifying the computation of axle loadings For example the lift coefficient for the front axle is then equal to CLF CL 2 CPM However if CPM were based on an overall length OAL a ratio of WB and OAL would have to be included in the computation Vehicle Parameters The wheelbase designator L used in vehicle dynamics Reference 2 1 1 1 was not adopted since it is used for the aerodynamic lift force Frontal area and scale factor symbols are consistent with aerodynamic usage Flow Parameters Symbols and definitions for air flow parameters were chosen consistent with aerodynamics terminology. The definition of equivalent full scale velocity VEQ is included to provide a simple means of relating reduced scale model flow conditions to full scale Standard day conditions were chosen to correspond to those defined at sea level conditions for the U S Standard Atmosphere adopted by NASA NOAA and USAF in 1976 Reference 2 1 3 1 For high speed motorsports and high humidity thermal applications references are cited to account for the effects of compressibility on dynamic pressure and relative humidity on air density if deemed necessary Yaw Weighted Drag Coefficient Ambient wind magnitude heading angle and vehicle path directions have an effect on the overall average aerodynamic drag of a vehicle during a particular duty cycle The yaw weighted drag coefficient is defined as the average drag coefficient during a particular driving schedule and ambient wind input The wind and driving schedule factors affecting the wind averaged drag coefficient have not been standardized Some examples of yaw weighted drag coefficient computations are given in References 2 1 1 2 2 1 1 4 Road Vehicles Ailton Cassetari, Society of Automotive Engineers, 1994 Aerodynamic Testing of Road Vehicles -**Testing Methods and Procedures** Road Vehicle Aerodynamics Forum Committee, 2016 The scope of this SAE Information Report is confined to wind tunnel testing although it is recognized that many aspects of the aerodynamic characteristics of road vehicles can be investigated in other test facilities such as water tanks or especially on the road For example coastdown testing is often used to determine aerodynamic drag either in isolation or as part of the total resistance and artificial gust generators are used to investigate the sensitivity of vehicles to cross wind gusts Also excluded from the present Report are climatic wind tunnel tests of road vehicles which are defined in more detail in Section 3 The Report covers the aerodynamic

requirements of a wind tunnel for automotive testing together with the facility equipment needed and the requirements affecting the test vehicle or model The test methods and procedures described here include those for six component force measurements and measurements of pressures and velocities both on the vehicle model surface and in the surrounding flow field Flow visualization techniques are outlined with reference to the detailed coverage in a related SAE Information Report 2

In addition the reduction analysis and presentation of wind tunnel data are considered with further references to associated SAE Information Reports 3 4 on corrections to be applied for wind tunnel blockage effects Finally methods are discussed for the validation of the wind tunnel data e g by tunnel to road correlation studies As already indicated this document has been prepared in conjunction with a number of other SAE Information Reports and Recommended Practices 1 5 each of which provides greater detail than is given here on its particular aspect of automotive aerodynamic testing Much of the information presented in this document is mature and unlikely to change in the foreseeable future The remainder relating particularly to moving ground simulation and blockage correction techniques is nevertheless judged by the Road Vehicle Aerodynamics Committee to be of historical significance To supplement it contents users are encouraged to consult more recent revisions of J1252 J1594 and J2881 as well as relevant SAE conference papers published since the 1993 issue of this document

Modifying the Aerodynamics of Your Road Car Julian Edgar, 2018 Want to improve handling straight line performance or fuel economy In that case you ll achieve best results by modifying your vehicle s aerodynamics. This handbook is a must read that takes you from testing the standard car through to making sophisticated aerodynamic modifications that have real impact. An Introduction to Modern Vehicle Design Julian Happian-Smith, 2001 An Introduction to Modern Vehicle Design provides a thorough introduction to the many aspects of passenger car design in one volume Starting with basic principles the author builds up analysis procedures for all major aspects of vehicle and component design Subjects of current interest to the motor industry such as failure prevention designing with modern materials ergonomics and control systems are covered in detail and the author concludes with a discussion on the future trends in automobile design With contributions from both academics lecturing in motor vehicle engineering and those working in the industry An Introduction to Modern Vehicle Design provides students with an excellent overview and background in the design of vehicles before they move on to specialised areas Filling the niche between the more descriptive low level books and books which focus on specific areas of the design process this unique volume is essential for all students of automotive engineering
