Biomass Modification, Characterization and Process Monitoring Analytics to Support Biofuel and Biomaterial Production

Robert Henry, Blake Simmons, Jason Lupoi, 2016-06-09 The conversion of lignocellulosic biomass into renewable fuels and other commodities has provided an appealing alternative towards supplanting global dependence on fossil fuels The suitability of multitudes of plants for deconstruction to useful precursor molecules and products is currently being evaluated These studies have probed a variety of phenotypic traits including cellulose non cellulosic polysaccharide lignin and lignin monomer composition glucose and xylose production following enzymatic hydrolysis and an assessment of lignin carbohydrate and lignin lignin linkages to name a few These quintessential traits can provide an assessment of biomass recalcitrance enabling researchers to devise appropriate deconstruction strategies Plants with high polysaccharide and lower lignin contents have been shown to breakdown to monomeric sugars more readily Not all plants contain ideal proportions of the various cell wall constituents however The capabilities of biotechnology can alleviate this conundrum by tailoring the chemical composition of plants to be more favorable for conversion to sugars fuels etc Increases in the total biomass yield cellulose content or conversion efficiency through for example a reduction in lignin content are pathways being evaluated to genetically improve plants for use in manufacturing biofuels and bio based chemicals Although plants have been previously domesticated for food and fiber production the collection of phenotypic traits prerequisite for biofuel production may necessitate new genetic breeding schemes Given the plethora of potential plants available for exploration rapid analytical methods are needed to more efficiently screen through the bulk of samples to hone in on which feedstocks contain the desired chemistry for subsequent conversion to valuable renewable commodities The standard methods for analyzing biomass and related intermediates and finished products are laborious potentially toxic and or destructive They may also necessitate a complex data analysis significantly increasing the experimental time and add unwanted delays in process monitoring where delays can incur in significant costs Advances in thermochemical and spectroscopic techniques have enabled the screening of thousands of plants for different phenotypes such as cell wall cellulose non cellulosic polysaccharide and lignin composition lignin monomer composition or monomeric sugar release Some instrumental methods have been coupled with multivariate analysis providing elegant chemometric predictive models enabling the accelerated identification of potential feedstocks In addition to the use of high throughput analytical methods for the characterization of feedstocks based on phenotypic metrics rapid instrumental techniques have been developed for the real time monitoring of diverse processes such as the efficacy of a specific pretreatment strategy or the formation of end products such as biofuels and biomaterials Real time process monitoring techniques are needed for all stages of the feedstocks to biofuels conversion process in order to maximize efficiency and lower costs by monitoring and optimizing performance These approaches allow researchers to adjust experimental conditions during rather than at the conclusion of a process thereby decreasing overhead

expenses This Frontiers Research Topic explores options for the modification of biomass composition and the conversion of these feedstocks into biofuels or biomaterials and the related innovations in methods for the analysis of the composition of plant biomass and advances in assessing up and downstream processes in real time Finally a review of the computational models available for techno economic modeling and lifecycle analysis will be presented *Insight into plant spatial omics: Mass spectrometry imaging* Xiaodong Wang,Liangyu Liu,Jun Han,Zhili Li,Bin Li,Yinglang Wan,2023-09-19 *Mycotoxins Study* Cristina Juan García,2021-09-07 The evaluation of the presence of mycotoxins in different matrices is achieved through different analytical tools including quantitative or qualitative determinations Studies of mycotoxin isolation using chromatographic equipment coupled to spectrometry detectors QTrap MS MS MS MS tandem QTOF MS MS are the most useful tools to control their presence All these studies represent key steps in the establishment of the limits of detection limits of quantification points of identification accuracy reproducibility and repeatability of different procedures The maximum permitted or recommended levels for mycotoxins in different matrices are within a wide range including the levels tolerated by infants and animals In addition decontaminated strategies as well as control and evaluation of exposure are demanded by authorities and food safety systems These authorities are not only concerned with the determination of mycotoxin presence but also with the toxicological effects of mycotoxins and in vivo or in vitro assays are necessary for a complete evaluation In fact these assays are the basis for the control and prevention of population exposure to mycotoxins in dietary exposure studies The most recent surveys focused on regulated mycotoxins aflatoxins fumonisins trichothecenes and zearalenones and emerging toxins such as enniatins and beauvericin in adult consumers while very few studies have monitored mycotoxin levels in infant products This Book of Toxins comprises 11 original contributions and one review New findings regarding presence of mycotoxins in aromatic and medicinal plants mango and orange juice juices pulps jams and beer from Morocco Pakistan and Portugal are reported In these studies innovative techniques to study their presence has been developed including liquid chromatography coupled with time of flight mass spectrometry to analyse mycotoxins and conjugated mycotoxins Novel strategies to detect mycotoxin presence and comparisons the characteristics of a rapid quantitative analysis of different mycotoxins deoxynivalenol ochratoxin A patulin sterigmatocystin and zearalenone are also presented using acetyl and butyrylcholinesterases and photobacterial strains of luminescent cells Additionally toxicological effects of zearalenone metabolites and beauvericin on SH SY5Y neuronal cells are presented One important point in the control of mycotoxins is related to decontaminated strategies and in this sense the efficacy of potentially probiotic fruit derived Lactobacillus isolates in removing aflatoxin M1 AFM1 is presented Other mycotoxin decontaminated techniques included in this book are electron beam irradiation EBI and degradation of zearalenone and ochratoxin A using ozone Finally a review that summarizes the newly discovered macrocyclic trichothecenes and their bioactivities over the last decade is included **Percutaneous Absorption of UV Filters Contained in Sunscreen Cosmetic Products** Zacarías León

González,2013-12-24 Zacar as Le n s thesis describes the development and validation of analytical methods to estimate the processes set in motion by percutaneous absorption of UV filters in sunscreen cosmetic products Le n describes these methods in both in vitro and non invasive in vivo methodologies Currently dermatologists recommend the use of sunscreen products not only under conditions of extreme exposure to the sun but also in daily situations However the chemical compounds in these products contain may lead to undesired processes and cause induced toxicity estrogenic effects and endocrine activity Le n establishes methods to investigate these effects and provides valuable information on the undesired side effects associated with the use of UV filters found in sunscreen products The work in this thesis has led to a number of publications in renowned analytical chemistry journals **Vitamin D in 2020** Marie Courbebaisse,Etienne

Cavalier,2020-12-28 Many things have been said and written on the skeletal and non skeletal effects of vitamin D but the largest recent interventional studies are generally negative How should we thus position ourselves in 2020 Should we say stop or not yet Indeed the aging of the population as well as new challenges and discoveries is still triggering interest in this old molecule In this Special Edition of Nutrients we invited top experts to give their opinion on this important debate We also encouraged scientists to submit their latest research on nutritional requirements in the general population and in high risk groups as well as treatment strategies epidemiology analytical updates and new devices for vitamin D measurement and the effect of vitamin D on bone and extra skeletal health As readers will see this Special Issue reinforces the high prevalence of vitamin deficiency and insufficiency in the general population and supports the safety of this low cost molecule revealing new perspectives regarding the extra skeletal effects of vitamin D **Analysis of Pesticide in Tea** Guo-Fang Pang,2018-08-18

Analysis of Pesticide in Tea Chromatography Mass Spectrometry Methodology is a comprehensive book providing serial rapid high throughput analytical methods for determining more than 600 pesticides in tea There are increasing numbers of strict limit standards for pesticide residues in edible agricultural products in countries all over the world The threshold for pesticide residues in tea is high for international trade At present 17 countries and international organizations have stipulated MRL levels for over 800 pesticide residues in tea All methods described in this book are validated by an independent U S based organization AOAC International and all indexes have satisfied AOAC International s criteria China has a history of 5000 years in growing tea and is a large tea producer with 80 million people involved in tea growing China exports tea to over 100 countries worldwide enjoying a high reputation for quality and variety Covers a wide range of research activities that are highly appropriate to current research methods Reflects the most recent research in nearly all cases providing an excellent compilation of feasible methods needed for official analysis Describes methods that are internationally validated by an independent U S based organization AOAC International Authored by Dr Pang who is internationally recognized in the area of pesticide residues and other contaminants in foods **Anticancer plants:**
