Agroforestry In Europe Current Status And Future Prospects 1st Edition:

Geological Heritage and Biodiversity in Natural and Cultural Landscapes Antonio Miguel Martínez-Graña, José Ángel Sánchez Agudo, 2021-09-10 Geological Heritage has very diverse elements both for its intrinsic nature and for its social and scientific significance These elements have a scientific dimension stratigraphic geomorphological lithological paleontological etc and a landscape dimension both with implications for territorial management In territorial management and planning it is essential to carry out inventory and cataloging of places of natural and social interest to establish a comprehensive policy The identification and valuation of the geological and biological heritage and their interaction in the landscape should favor the conservation and preservation of this natural and historical heritage Sustainable development implies rational use that prevents the degradation or loss of these unique environments of the natural environment as well as a dissemination and awareness of landscape resources for a better understanding and enjoyment integrating activities of both environmental education and nature tourism *Sustainable Agriculture-Beyond Organic Farming* Sean Clark, 2018-07-17 This book is a printed edition of the Special Issue Sustainable Agriculture Beyond Organic Farming that was published in Sustainability **Innovative Approaches and Applications for Sustainable Rural Development** Alexandros Theodoridis, Athanasios Ragkos, Michail Salampasis, 2019-01-16 This book presents selected papers from the 8th International Conference on Information and Communication Technologies in Agriculture Food and Environment HAICTA 2017 which examine sustainable rural development in the context of environmental economic and the socio cultural dimension This book raises awareness of the importance of sustainable management in agriculture using examples of actual industry cases sustainable management practices new forms of rural cooperation and entrepreneurship **Agroforestry in Europe** Antonio Rigueiro-Rodríguez, Jim McAdam, María Rosa Mosquera-Losada, 2008-11-09 Agroforestry has come of age during the past three decades The age old practice of growing trees and crops and sometimes animals in interacting combinations that has been ignored in the single commodity oriented agricultural and forestry development paradigms has been brought into the realm of modern land use Today agroforestry is well on its way to becoming a specialized science at a level similar to those of crop science and forestry science To most land use experts however agroforestry has a tropical connotation They consider agroforestry as something that can and can only be identified with the tropics That is a wrong perception While it is true that the tropics compared to the temperate regions have a wider array of agroforestry systems and hold greater promise for potential agroforestry interventions it is also true that agroforestry has several opportunities in the temperate regions too Indeed the role of agroforestry is now recognized in Europe as exemplified by this book North America and elsewhere in the temperate zone Current interest in ecosystem management in industrialized countries strongly suggests that there is a need to embrace and apply agroforestry principles to help mitigate the environmental problems caused or exacerbated by commercial agricultural and forestry production enterprises **Trees, Forested Landscapes and Grazing**

Animals Ian D. Rotherham, 2013 In this comprehensive book the critical components of the European landscape forest parkland and other grazed landscapes with trees are addressed The book considers the history of grazed treed landscapes of large grazing herbivores in Europe and the implications of the past in shaping our environment today and in the future Debates on the types of anciently grazed landscapes in Europe and what they tell us about past and present ecology have been especially topical and controversial recently This treatment brings the current discussions and the latest research to a much wider audience The book breaks new ground in broadening the scope of wood pasture and woodland research to address sites and ecologies that have previously been overlooked but which hold potential keys to understanding landscape dynamics Eminent contributors including Oliver Rackham and Frans Vera present a text which addresses the importance of history in understanding the past landscape and the relevance of historical ecology and landscape studies in providing a future vision
