Potential Failure Mode and Effects Analysis (FMEA), 2008 **Design for Six Sigma Statistics : 59 Tools for Diagnosing and Solving Problems in DFSS Initiatives** Andrew Sleeper, 2005-12-05

In today's competitive environment, companies can no longer produce goods and services that are merely good with low defect levels; they have to be near perfect. **Design for Six Sigma Statistics** is a rigorous mathematical roadmap to help companies reach this goal. As the sixth book in the Six Sigma operations series, this comprehensive book goes beyond an introduction to the statistical tools and methods found in most books but contains expert case studies, equations, and step-by-step MINTAB instruction for performing DFSS Design of Experiments, Measuring Process Capability, Statistical Tolerancing in DFSS, and DFSS Techniques within the Supply Chain for Improved Results. The aim is to help you better diagnosis and root out potential problems before your product or service is even launched.

Implementation of DFMEA Methodology to Improve the Design of Special Assembly Tooling Ben D. Wenzel, 2013

In this study, the author successfully implemented a Design Failure Mode Effects Analysis (DFMEA) methodology to improve the design of special assembly tooling. The subject of the study was an existing trailer cart chosen because of the multitude of repairs that were required to keep the carts operational. The number and type of repairs were documented for 15 carts over a four-week period. The DFMEA methodology was applied per the AIAG Potential Failure Mode Effects Analysis (FMEA) 4th Ed reference manual. A cross-functional team of employees with expertise in the areas of Tooling, Manufacturing, Safety, Quality, Operations, and Production comprised the DFMEA team. Several meetings were held, and the DFMEA form was filled out with RPNs assigned by the cross-functional team. Any cause of failure with an RPN value greater than a threshold of 40 was labeled a critical item, and a corrective action was required for the cart redesign. The improvements and corrective actions suggested by the team reduced initial RPN values from over 300 to 40 and below. All corrective action improvements were incorporated into the redesigned cart, resulting in significant reduction in repairs, which translated to annual cost savings of more than 130,000 for the company.
