Mindshift Barbara Oakley, PhD, 2017-04-18 Mindshift reveals how we can overcome stereotypes and preconceived ideas about what is possible for us to learn and become. At a time when we are constantly being asked to retrain and reinvent ourselves to adapt to new technologies and changing industries, this book shows us how we can uncover and develop talents we didn't realise we had, no matter what our age or background. We're often told to follow our passions. But in Mindshift, Dr Barbara Oakley shows us how we can broaden our passions. Drawing on the latest neuroscientific insights, Dr Oakley shepherds us past simplistic ideas of aptitude and ability which provide only a snapshot of who we are now, with little consideration about how we can change. Even seemingly bad traits such as a poor memory come with hidden advantages like increased creativity. Profiling people from around the world who have overcome learning limitations of all kinds, Dr Oakley shows us how we can turn perceived weaknesses such as impostor syndrome and advancing age into strengths. People may feel like they're at a disadvantage if they pursue a new field later in life, yet those who change careers can be fertile cross-pollinators. They bring valuable insights from one discipline to another. Dr Oakley teaches us strategies for learning that are backed by neuroscience so that we can realize the joy and benefits of a learning lifestyle. Mindshift takes us deep inside the world of how people change and grow. Our biggest stumbling blocks can be our own preconceptions, but with the right mental insights we can tap into hidden potential and create new opportunities.

Understanding Learning

Difficulties in Maths: Dyscalculia, Dyslexia or Dyspraxia? Judy Hornigold, 2017-10-16 Why do some pupils experience maths learning difficulties? How can you determine whether there is a specific learning difficulty such as dyscalculia, dyspraxia or dyslexia? What teaching strategies can help overcome maths anxiety and specific maths learning difficulties? Without doubt, maths is one of the most important subjects taught in schools, and yet it is the one subject that can strike fear and dread in children from the very start of their education. In this book, Judy Hornigold explores potential causes of maths learning difficulties and particularly the specific difficulties that learners with dyscalculia, dyslexia and/or dyspraxia experience. It considers how general maths anxiety impedes mathematical development and then examines whether this or a more fundamental and specific difficulty with maths such as dyscalculia is the real root of difficulties. The book then looks in detail at a wide range of strategies to help overcome general maths anxiety and more specific learning difficulties. It addresses four distinct areas: core number reasoning, memory and visual spatial awareness as the main areas of difficulty for learners with dyscalculia; core number and reasoning, dyslexia, memory and dyspraxia; visual spatial awareness. *The*
