Algorithmic Puzzles Anany Levitin, Maria Levitin, 2011-10-14 Algorithmic puzzles are puzzles involving well defined procedures for solving problems This book will provide an enjoyable and accessible introduction to algorithmic puzzles that will develop the reader's algorithmic thinking The first part of this book is a tutorial on algorithm design strategies and analysis techniques Algorithm design strategies exhaustive search backtracking divide and conquer and a few others are general approaches to designing step by step instructions for solving problems Analysis techniques are methods for investigating such procedures to answer questions about the ultimate result of the procedure or how many steps are executed before the procedure stops The discussion is an elementary level with puzzle examples and requires neither programming nor mathematics beyond a secondary school level Thus the tutorial provides a gentle and entertaining introduction to main ideas in high level algorithmic problem solving The second and main part of the book contains 150 puzzles from centuries old classics to newcomers often asked during job interviews at computing engineering and financial companies The puzzles are divided into three groups by their difficulty levels The first fifty puzzles in the Easier Puzzles section require only middle school mathematics The sixty puzzle of average difficulty and forty harder puzzles require just high school mathematics plus a few topics such as binary numbers and simple recurrences which are reviewed in the tutorial All the puzzles are provided with hints detailed solutions and brief comments The comments deal with the puzzle origins and design or analysis techniques used in the solution The book should be of interest to puzzle lovers students and teachers of algorithm courses and persons expecting to be given puzzles during job interviews

programming teaching readers to program while solving puzzles Few introductory students want to program for programming's sake Puzzles are real world applications that are attention grabbing intriguing and easy to describe Each lesson starts with the description of a puzzle After a failed attempt or two at solving the puzzle the reader arrives at an Aha moment a search strategy data structure or mathematical fact and the solution presents itself The solution to the puzzle becomes the specification of the code to be written Readers will thus know what the code is supposed to do before seeing the code itself This represents a pedagogical philosophy that decouples understanding the functionality of the code from understanding programming language syntax and semantics Python syntax and semantics required to understand the code are explained as needed for each puzzle Readers need only the rudimentary grasp of programming concepts that can be obtained from introductory or AP computer science classes in high school The book includes more than twenty puzzles and more than seventy programming exercises that vary in difficulty Many of the puzzles are well known and have appeared in publications and on websites in many variations They range from scheduling selfie time with celebrities to solving Sudoku problems in seconds to verifying the six degrees of separation hypothesis The code for selected puzzle solutions is downloadable from the book's website the code for all puzzle solutions is available to instructors

Learning Algorithms Through Programming and Puzzle Solving Alexander Kulikov,Pavel Pevzner,2018-12-17

Learning Algorithms Through Programming and Puzzle Solving is one of the first textbooks to emerge from the recent Massive Open Online Course MOOC revolution and a companion to the authors online specialization on Coursera and MicroMasters Program on edX The book introduces a programming centric approach to learning algorithms and strikes a unique balance between algorithmic ideas programming challenges and puzzle solving Since the launch of this project on Coursera and edX hundreds of thousands students tried to solve programming challenges and algorithmic puzzles covered in this book The book is also a step towards developing an Intelligent Tutoring System for learning algorithms In a classroom once a student takes a wrong turn there are limited opportunities to ask a question resulting in a learning breakdown or the inability to progress further without individual guidance When a student suffers a learning breakdown that student needs immediate help in order to proceed Traditional textbooks do not provide such help but the automated grading system described in this MOOC book does The book is accompanied by additional educational materials that include the book website video lectures slides FAQs and other resources available at Coursera and EdX **Conference Proceedings** ,1999
