Analysis of Algorithms P. Sudhakar, M. Gunasekar, V. Kavitha, 2016 **125 Problems in Text Algorithms** Maxime Crochemore, Thierry Lecroq, Wojciech Rytter, 2021-07-01 String matching is one of the oldest algorithmic techniques yet still one of the most pervasive in computer science The past 20 years have seen technological leaps in applications as diverse as information retrieval and compression This copiously illustrated collection of puzzles and exercises in key areas of text algorithms and combinatorics on words offers graduate students and researchers a pleasant and direct way to learn and practice with advanced concepts The problems are drawn from a large range of scientific publications both classic and new Building up from the basics the book goes on to showcase problems in combinatorics on words including Fibonacci or Thue Morse words pattern matching including Knuth Morris Pratt and Boyer Moore like algorithms efficient text data structures including suffix trees and suffix arrays regularities in words including periods and runs and text compression including Huffman Lempel Ziv and Burrows Wheeler based methods Problems on Algorithms Habib Izadkhah, 2022 With approximately 2500 problems this book provides a collection of practical problems on the basic and advanced data structures

design and analysis of algorithms To make this book suitable for self instruction about one third of the algorithms are supported by solutions and some others are supported by hints and comments This book is intended for students wishing to deepen their knowledge of algorithm design in an undergraduate or beginning graduate class on algorithms for those teaching courses in this area for use by practicing programmers who wish to hone and expand their skills and as a self study text for graduate students who are preparing for the qualifying examination on algorithms for a Ph D program in Computer Science or Computer Engineering About all it is a good source for exam problems for those who teach algorithms and data structure The format of each chapter is just a little bit of instruction followed by lots of problems This book is intended to augment the problem sets found in any standard algorithms textbook This book begins with four chapters on background material that most algorithms instructors would like their students to have mastered before setting foot in an algorithms class The introductory chapters include mathematical induction complexity notations recurrence relations and basic algorithm analysis methods provides many problems on basic and advanced data structures including basic data structures arrays stack queue and linked list hash tree search and sorting algorithms provides many problems on algorithm design techniques divide and conquer dynamic programming greedy algorithms graph algorithms and backtracking algorithms is rounded out with a chapter on NP completeness
