Ideas for a Low Expected Return World

Investors today face a challenging world of low expected returns and high risks. The forward-looking real yield of the 60/40 U.S. stock/bond portfolio is at 2.6%, its lowest level in 112 years.

We think that risk-balanced diversification across well-chosen return sources is the most reliable strategic approach to achieving ambitious real return targets.

performance of its constituent models separately Rolling window and cross validation tests are used in this evaluation in order to provide a comprehensive assessment framework A risk off filter is developed to limit risk during uncertain market periods and consequently to improve the Sharpe ratio of the model The risk adjusted performance of the final model supported by the risk off filter achieves a Sharpe ratio of 1.63 which surpasses both the model's performance without the filter that delivers Sharpe ratio of 1.41 and the one from the S P500 index of 0.80 The substantial increase in risk adjusted returns is accomplished by reducing the model's volatility from an annual standard of deviation of 15.75% to 11.22% which represents an almost 30% decrease in volatility
