Age Of Context Mobile Sensors Data And The Future Privacy Robert Scoble:

Age of Context Robert Scoble, Shel Israel, 2014 In 2006 co authors Robert Scoble and Shel Israel wrote *Naked Conversations* a book that persuaded businesses to embrace what we now call social media Six years later they have teamed up again to report that social media is but one of five converging forces that promise to change virtually every aspect of our lives You know these other forces already mobile data sensors and location based technology Combined with social media they form a new generation of personalized technology that knows us better than our closest friends Armed with that knowledge our personal devices can anticipate what we ll need next and serve us better than a butler or an executive assistant The resulting convergent superforce is so powerful that it is ushering in a era the authors call the Age of Context In this new era our devices know when to wake us up early because it snowed last night they contact the people we are supposed to meet with to warn them we re running late They even find content worth watching on television They also promise to cure cancer and make it harder for terrorists to do their damage Astoundingly in the coming age you may only receive ads you want to see Scoble and Israel have spent more than a year researching this book They report what they have learned from interviewing more than a hundred pioneers of the new technology and by examining hundreds of contextual products What does it all mean How will it change society in the future The authors are unabashed tech enthusiasts but as they write an elephant sits in the living room of our book and it is called privacy We are entering a time when our technology serves us best because it watches us collecting data on what we do who we speak with what we look at There is no doubt about it Big Data is watching you The time to lament the loss of privacy is over The authors argue that the time is right to demand options that enable people to reclaim some portions of that privacy [Age of Context](#) Robert Scoble, Shel

Privacy in the Age of Big Data Theresa Payton,Ted Claypoole,2023-03-15 A thorough update to a classic in the field of privacy and big data We have a global privacy problem The average person provides more information about themselves to more outsiders than any time in history Corporations governments and even our neighbors can know where we are at times can quickly learn our preferences and priorities and see who we meet The past decade has brought deep changes in the collection of our private information the regulation of that collection and in people s sensitivity to loss of privacy The nascent privacy threatening technology trends of a decade ago have blossomed into relentless data capturing systems that police and companies have come to rely on To address the expansion of personal data capture entire data regulatory regimes have arisen throughout the world with new regulations added each year People are more concerned regulators are more aggressive yet data collection continues to increase with consequences around the world Social media use has fragmented in the past five years spreading personal information over dozens of platforms Even most of our new televisions have started collecting second by second information about our households recently and some of

those televisions can recognize the individuals watching and the devices they carry Amazon just activated a new worldwide network using bandwidth from personal wifi of Echo devices and Ring security systems The beat of new intrusions never seems to end These data trends are relentless and yet response to the pandemic accelerated them Rapid development of contactless everything became the norm Contact tracing apps became acceptable QR codes for everything from menus to contact information were created quickly Businesses are faced with hybrid in office and remote workforces More people are dependent on online and mobile technologies for food medicine and even human connection And each of these contacts can be captured somewhere and logged in a file for marketing or surveillance People want to keep their lives private but they don't know how The second edition of *Privacy in the Age of Big Data* addresses the significant advances in data driven technology their intrusion deeper in our lives the limits on data collection newly required by governments in North America and Europe and the new security challenges of world rife with ransomware and hacking This thoroughly updated edition demonstrates personal privacy vulnerabilities and shows ways to live a safer more private life Other privacy books tend to focus deeply on the evils of large tech companies or more academic and technical concerns But *Privacy in the Age of Big Data* second edition helps regular people understand the privacy threats and vulnerabilities in their daily lives and will provide solutions for maintaining better privacy while enjoying a modern life Unlike other books this one shows what you can do to make a difference to understand your current digital footprint and what you need to do to claw back your privacy and secure it in the future While *PRIVACY IN THE AGE OF BIG DATA* will have cross sectional appeal to many demographics working adults 25 60 and CEOs and Boards of businesses are the primary demographic young enough to know we need to do something to protect privacy and old enough to remember what happens when we haven't in the past With down to earth prose and examples pulled from daily life the writing style will attract buyers of all education levels

The Best of Scobleizer
(2011-2012) Robert Scoble, 2013-01-06 This book features a curated compilation of Robert Scoble's best posts from 2011 2012 If you're at all interested in how today's technology is shaping the future and making our lives better you won't want to miss this great collection of posts discussing innovative startups and cool new tech advancements Excerpt from the Book How does Silicon Valley and Apple miss Steve Jobs Well on Monday night I was having dinner with Gary Morgenthaler who was one of the investors in Siri along with a few Siri team members and I heard stories that they weren't able to tell me while Steve Jobs was alive For instance Jobs called Siri management at least 30 times personally in about a month to convince them to join Also Steve Jobs yelled at Apple managers who didn't get why Siri was so important to Apple But most important to me and the book I'm writing with Shel Israel Jobs had already started working with the team on how to make Siri more contextually aware In fact Norman Winarsky who heads up SRI the lab where Siri was developed told me that SRI is about to start testing out a new app that will dig deeper into your email and your calendar to assist you in a much deeper way than Siri can right now What do we meet by context Well Siri today is pretty stupid about what's on your calendar Ask it where is

my next meeting and it will show you your next meeting but it doesn't know where it is. Close but no cigar. It gets worse from there. Ask it where is the best place to get lunch tomorrow and Siri answers with places near my home. Problem is that tomorrow I'm going to be at the Apple iPhone 5 launch in San Francisco. Siri is quite stupid about context, location, and a bunch of other things. Will it improve? Apple already announced some improvements to Siri. For instance, Siri will with iOS 6 be able to start applications. But it's hardly expected to be contextually aware in any real way. Ask Siri what is my favorite gas station. Siri answers I don't know. The problem is that isn't really true. Apple knows what gas stations I'm most likely to stop at. Or it could if it just knew how to contextually evaluate the data that both Verizon and Apple already have streaming from my phone. If it doesn't know something like my favorite gas station, it certainly doesn't know the answer to something simple like how many times do I eat at Chinese restaurants. That's easily verifiable. Ask it such a question and it just brings up a list of Chinese restaurants near you. It doesn't even try to accurately turn down the question. But back to Jobs. He saw Siri's potential to add a new, simpler, contextually aware user interface to any device. There are lots of rumors that Apple will use something like Siri in other products like its Apple TV product. In fact, at dinner the other night I learned that at least one of the team members that remains at Apple is now working on a secret new project. I doubt we'll learn about that tomorrow but I'll be looking for signs that Apple understands how to take us into the contextual age. I'll be looking for signs that Steve Jobs' passion for Siri is still being listened to.

Privacy in Mobile and Pervasive Computing Marc Langheinrich, Florian Schaub, 2018-12-03

It is easy to imagine that a future populated with an ever increasing number of mobile and pervasive devices that record our minute goings and doings will significantly expand the amount of information that will be collected, stored, processed, and shared about us by both corporations and governments. The vast majority of this data is likely to benefit us greatly, making our lives more convenient, efficient, and safer through custom tailored and context aware services that anticipate what we need, where we need it, and when we need it. But beneath all this convenience, efficiency, and safety lurks the risk of losing control and awareness of what is known about us in the many different contexts of our lives. Eventually we may find ourselves in a situation where something we said or did will be misinterpreted and held against us, even if the activities were perfectly innocuous at the time. Even more concerning, privacy implications rarely manifest as an explicit, tangible harm. Instead, most privacy harms manifest as an absence of opportunity which may go unnoticed even though it may substantially impact our lives. In this Synthesis Lecture we dissect and discuss the privacy implications of mobile and pervasive computing technology. For this purpose we not only look at how mobile and pervasive computing technology affects our expectations of and ability to enjoy privacy but also look at what constitutes privacy in the first place and why we should care about maintaining it. We describe key characteristics of mobile and pervasive computing technology and how those characteristics lead to privacy implications. We discuss seven approaches that can help support end user privacy in the design of mobile and pervasive computing technologies and set forward six challenges that will need to be addressed by future

research The prime target audience of this lecture are researchers and practitioners working in mobile and pervasive computing who want to better understand and account for the nuanced privacy implications of the technologies they are creating Those new to either mobile and pervasive computing or privacy may also benefit from reading this book to gain an overview and deeper understanding of this highly interdisciplinary and dynamic field [Is Privacy Dead?](#) David Houle, 2013

[ContextProbe](#) Fuming Shih, 2015 My research investigates the following question What factors affect people's privacy preferences for disclosing data that is collected about them when interacting with mobile applications Research about information privacy has revealed that there are relations between the role of context and people's expectations about privacy But it is unclear how those findings can be applied to the ubiquitous environment where mobile apps operate In order to illuminate this problem I have developed a framework ContextProbe which supports both quantitative and qualitative investigations of how user context and other external factors jointly affect people's willingness to disclose personal information to mobile apps As a consequence of this work I have learned that people use contextual factors in making decisions about disclosing personal information to apps Some of the significant privacy contextual factors are people's frequently visited places specific time slots who is around and activities people are engaged in Although contextual factors help they do not provide a complete explanation of people's privacy choices More importantly I found that other external factors such as purposes of data use and trust in the app itself outweigh contextual factors when considering information disclosure My study showed that subjects were not aware of context in thinking about disclosure when purpose of data use was presented together in the question Surprisingly results drawn from in situ responses are the exact opposite to previous survey based approaches on the effect of apps showing their purpose strings when requesting personal information showing less information seems to result in greater willingness to disclose ContextProbe has three major parts app building platform personal data store and application server The app building platform allows experimenters to create apps for ESM studies easily within a visual programming environment Apps built by ContextProbe can be used to collect sensor data on mobile phones as well as subject reported data for representing subjects context In addition the apps can probe subjects privacy preference in situ with the detected context The personal data store holds all data collected from subjects phones and is responsible for sending data automatically to the corresponding application server It provides a one stop dashboard approach that lets subjects review information collected by the ESM apps The application server aggregates all collected data in the study and monitors the health status of data collection tasks running on subjects phone ContextProbe provides an automatic process for study subjects and experimenters to easily set up personal data store and application server without extra overheads comparing to other existing architectures for ESM studies My work has opened up the following new questions how do we best represent the information of privacy relevant contexts during preference solicitation And how to balance the trade offs between sampling in various contexts and the cost of subjects times Further research in fields such as

behavioral economics that require real time monitoring of user context data collection and in situ responses might well be conducted using the ContextProbe framework

Mobile Context Awareness Tom Lovett, Eamonn O'Neill, 2012-04-27 Mobile context awareness is a popular research trend in the field of ubiquitous computing Advances in mobile device sensory hardware and the rise of virtual sensors such as web application programming interfaces APIs mean that the mobile user is exposed to a vast range of data that can be used for new advanced applications Mobile Context Awareness presents work from industrial and academic researchers focusing on novel methods of context acquisition in the mobile environment particularly through the use of physical and virtual sensors along with research into new applications utilising this context In addition the book provides insights into the technical and usability challenges involved in mobile context awareness as well as observations on current and future trends in the field

Protecting Location Privacy in the Era of Big Data Yan Yan (Computer scientist), Adnan Mahmood, Quan Z. Sheng, 2025 This book examines the uses and potential risks of location based services LBS in the context of big data with a focus on location privacy protection methods The growth of the mobile Internet and the popularity of smart devices have spurred the development of LBS and related mobile applications However the misuse of sensitive location data could compromise the physical and communication security of associated devices and nodes potentially leading to privacy breaches This book explores the potential risks to the location privacy of mobile users in the context of big data applications It discusses the latest methods and implications of location privacy from different perspectives The author offers case studies of three applications statistical disclosure and privacy protection of location based big data using a centralised differential privacy model a user location perturbation mechanism based on a localised differential privacy model and terminal location perturbation using a geo indistinguishability model Linking recent developments in three dimensional positioning and artificial intelligence the book also predicts future trends and provides insights into research issues in location privacy This title will be a valuable resource for researchers students and professionals interested in location based services privacy computing and protection wireless network security and big data security
