Exact and Approximate Solutions for Mathematical Models in Science and Engineering Christian

Constanda, Paul J. Harris, Bardo E. J. Bodmann, 2024-07-13 This contributed volume collects papers presented during a special session on integral methods in science and engineering at the 2023 International Conference on Computational and Mathematical Methods in Science and Engineering CMMSE held in Cadiz Spain from July 3-8 2023. Covering the applications of integral methods to scientific developments in a variety of fields, the chapters in this volume are written by well-known researchers in their respective disciplines and present new results in both pure and applied mathematics. Each chapter shares a common methodology based on a combination of analytic and computational tools, an approach that makes this collection a valuable multidisciplinary reference on how mathematics can be applied to various real-world processes and phenomena.

Lipman Bers, a Life in Mathematics Linda Keen, Irwin Kra, Rubí E. Rodríguez, 2015-09-15 The book is part biography and part collection of mathematical essays that gives the reader a perspective on the evolution of an interesting mathematical life. It is all about Lipman Bers, a giant in the mathematical world who lived in turbulent and exciting times. It captures the essence of his mathematics: a development and transition from applied mathematics to complex analysis, quasiconformal mappings and moduli of Riemann surfaces, and the essence of his personality: a progression from a young revolutionary refugee to an elder statesman in the world of mathematics and a fighter for global human rights and the end of political torture. The book contains autobiographical material and short reprints of his work. The main content is in the exposition of his research contributions, sometimes with novel points of view by students, grand students, and colleagues. The research described was fundamental to the growth of a central part of 20th-century mathematics that now, in the 21st century, is in a healthy state with much current interest and activity. The addition of personal recollections, professional tributes, and photographs yields a picture of a man, his personal and professional family, and his time.

Approximation by Solutions of Partial Differential Equations B. Fuglede, M. Goldstein, W. Haussmann, W.K. Hayman, L. Rogge, 2012-12-06 This volume consists of the proceedings of the NATO Advanced Research Workshop on Approximation by Solutions of Partial Differential Equations, Quadrature Formulae, and Related Topics, which was held at Hanstholm, Denmark. These proceedings include the main invited talks and contributed papers given during the workshop. The aim of these lectures was to present a selection of results of the latest research in the field. In addition to covering topics in approximation by solutions of partial differential equations and quadrature formulae, this volume is also concerned with related areas such as Gaussian quadratures, the Pompeiu problem, rational approximation to the Fresnel integral, boundary correspondence of univalent harmonic mappings, the application of the Hilbert transform in two-dimensional aerodynamics, finely open sets in the limit set of a finitely generated Kleinian group, scattering theory, harmonic and maximal measures for rational functions, and the solution of the classical Dirichlet problem. In addition, this volume includes some problems in potential theory which were

Bulletin of the American Mathematical Society, 2001 *Nonlinear Waves* Rentaro Agemi, 1997 **Nonlinear Diffusion Equations and Their Equilibrium States II** W.-M. Ni, L.A. Peletier, James Serrin, 1988-06-24 In recent years considerable interest has been focused on nonlinear diffusion problems the archetypical equation for these being $U_t = U \Delta u$ Here denotes the n dimensional Laplacian the solution $u(x, t)$ is defined over some space time domain of the form $\mathbb{R}^n \times [0, T]$ and $f(u)$ is a given real function whose form is determined by various physical and mathematical applications These applications have become more varied and widespread as problem after problem has been shown to lead to an equation of this type or to its time independent counterpart the elliptic equation of equilibrium $U \Delta u = 0$ Particular cases arise for example in population genetics the physics of nuclear stability phase transitions between liquids and gases flows in porous media the Lend Emden equation of astrophysics various simplified combustion models and in determining metrics which realize given scalar or Gaussian curvatures In the latter direction for example the problem of finding conformal metrics with prescribed curvature leads to a ground state problem involving critical exponents Thus not only analysts but geometers as well can find common ground in the present work The corresponding mathematical problem is to determine how the structure of the nonlinear function $f(u)$ influences the behavior of the solution *Generalized Solutions of a System of Differential Equations of the First Order and Elliptic Type with Discontinuous Coefficients* Bogdan Bojarski, 2009 **Lecture Notes on Ordinary Differential Equations** Garrett Birkhoff, Gian-Carlo Rota, 1961 **JMSJ** Nihon Sūgakkai, 2002 **Proceedings**, 1965

Two-Dimensional Geometric Variational Problems Jürgen Jost, 1991-03-29 This monograph treats variational problems for mappings from a surface equipped with a conformal structure into Euclidean space or a Riemannian manifold Presents a general theory of such variational problems proving existence and regularity theorems with particular conceptual emphasis on the geometric aspects of the theory and thorough investigation of the connections with complex analysis Among the topics covered are Plateau's problem the regularity theory of solutions a variational approach for obtaining various conformal representation theorems a general existence theorem for harmonic mappings and a new approach to Teichmüller theory via harmonic maps
