Aviation and Its Management Arif Sikander,2019-05-22 Aviation has grown leaps and bounds within the last decade Aviation courses and training at all levels have shown an exponential increase around the globe There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area This book was written with the purpose of meeting this need of the aviation sector Due to the diversified nature of aviation knowledge which includes flying engineering airports allied trades for aircraft and airports airline and airport management and operations education etc one text alone will not suffice and do justice to address all these areas It is envisaged to develop subsequent parts of this book to cover all these knowledge areas This book is the first installment of any subsequent books and explores issues including airline management and operations airline business models airport systems flight operational procedures aircraft maintenance runway safety management systems and air traffic management In particular attention will be given to aspects such as analysis of air traffic in a domestic market runway safety management systems critical success factors for multiple MRO service providers key pain points of the industry to be addressed to move into the future new research on hub airports for international flights new business models for airlines and runway safety management systems This book is useful to aviation managers educators students and professionals interested in any of the above issues *Novel and Intelligent Digital Systems: Proceedings of the 4th International Conference (NiDS 2024)* Phivos Mylonas,Dimitris Kardaras,Jaime Caro,2024-10-15 This book compiles the research findings presented at the 4th International Conference on Novel Intelligent Digital Systems NiDS 2024 which took place in Athens Greece on September

25-27 2024 hosted by the University of West Attica NiDS 2024 was conducted in a hybrid format offering participants the flexibility to join either online or in person. The conference highlighted the latest innovations in intelligent systems and emphasized the collaborative research that advances Artificial Intelligence (AI) in software development. It served as a platform for high-quality research, providing a space to explore challenges and innovations in AI. NiDS 2024 referred to experts, researchers, and scholars in artificial and computational intelligence, as well as the broader field of computer science, offering insights into interconnected and complementary areas. By promoting the exchange of ideas, the conference aimed to strengthen and expand the network of researchers, academics, and industry professionals.

Generative Systems and Intelligent Tutoring Systems Sabine Graf, Angelos Markos, 2025-07-28. This book constitutes the refereed proceedings of the 21st International Conference on Intelligent Tutoring Systems (ITS 2025) held in Alexandroupolis, Greece, during June 2-6, 2025. The 21 full papers, 27 short papers, and 5 posters included in this book were carefully reviewed and selected from 67 submissions. The papers are organized in the following topical conference tracks: Part I: Generative Tutoring Systems. The goal of this part is to show how new techniques inspired by artificial intelligence (AI) and new methods in education can improve learning, teaching, and generate the capacity for knowledge acquisition and much more. Part II: Application areas, environments, and techniques for AI systems. This part shows the progress of research investigating the different application areas such as education, health, techniques such as neural networks, data mining, natural language processing, and environments such as games, virtual reality, cognitive robots for effective AI systems.

A Philosophy of Technology Pieter E. Vermaas, 2011. In *A Philosophy of Technology: From Technical Artefacts to Sociotechnical Systems*, technology is analysed from a series of different perspectives. The analysis starts by focussing on the most tangible products of technology called technical artefacts and then builds step-wise towards considering those artefacts within their context of use and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation. Philosophical characterisations are given of technical artefacts, their context of use, and of sociotechnical systems. Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering. And the issue is considered how engineers and others can or cannot influence the development of technology. These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded. The running example in the book is aviation, where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system. Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing and the role of engineers therein.
