Algebraic Geometry By J S Milne:

Algebraic Geometry J. S. Milne, 2012 Étale Cohomology James S. Milne, 2025-04-08 An authoritative introduction to the essential features of étale cohomology A Grothendieck's work on algebraic geometry is one of the most important mathematical achievements of the twentieth century In the early 1960s he and M Artin introduced étale cohomology to extend the methods of sheaf theoretic cohomology from complex varieties to more general schemes This work found many applications not only in algebraic geometry but also in several different branches of number theory and in the representation theory of finite and p adic groups In this classic book James Milne provides an invaluable introduction to étale cohomology covering the essential features of the theory Milne begins with a review of the basic properties of flat and étale morphisms and the algebraic fundamental group He then turns to the basic theory of étale sheaves and elementary étale cohomology followed by an application of the cohomology to the study of the Brauer group After a detailed analysis of the cohomology of curves and surfaces Milne proves the fundamental theorems in étale cohomology those of base change purity Poincaré duality and the Lefschetz trace formula and applies these theorems to show the rationality of some very general L series **Étale Cohomology (PMS-33), Volume 33** James S. Milne, 2017 One of the most important mathematical achievements of the past several decades has been A Grothendieck's work on algebraic geometry In the early 1960s he and M Artin introduced étale cohomology in order to extend the methods of sheaf theoretic cohomology from complex varieties to more general schemes This work found many applications not only in algebraic geometry but also in several different branches of number theory and in the representation theory of finite and p adic groups Yet until now the work has been available only in the original massive and difficult papers In order to provide an accessible introduction to étale cohomology J S Milne offers this more elementary account covering the essential features of the theory The author begins with a review of the basic properties of flat and étale morphisms and of the algebraic fundamental group The next two chapters concern the basic theory of étale sheaves and elementary étale cohomology and are followed by an application of the cohomology to the study of the Brauer group After a detailed analysis of the cohomology of curves and surfaces Professor Milne proves the fundamental theorems in étale cohomology those of base change purity Poincaré duality and the Lefschetz trace formula He then applies these theorems to show the rationality of some very general L series Originally published in 1980 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Algebraic Groups J. S. Milne, 2017-09-21 Algebraic groups play much the same role for algebraists as Lie groups play for analysts This book is the first comprehensive introduction to the theory of algebraic group schemes over fields that includes

the structure theory of semisimple algebraic groups and is written in the language of modern algebraic geometry The first eight chapters study general algebraic group schemes over a field and culminate in a proof of the Barsotti Chevalley theorem realizing every algebraic group as an extension of an abelian variety by an affine group After a review of the Tannakian philosophy the author provides short accounts of Lie algebras and finite group schemes The later chapters treat reductive algebraic groups over arbitrary fields including the Borel Chevalley structure theory Solvable algebraic groups are studied in detail Prerequisites have also been kept to a minimum so that the book is accessible to non specialists in algebraic geometry

Algebraic Geometry J. S. Milne, 2005 *Explicit Arithmetic of Jacobians of Generalized Legendre Curves Over Global Function Fields* Lisa Berger, Chris Hall, Rene Pannekoek, Rachel Pries, Shahed Sharif, 2020-09-28 The authors study the Jacobian J of the smooth projective curve C of genus $r-1$ with affine model $y^r = x^{r-1}x+1$ over the function field $\mathbb{F}_p(t)$ when p is prime and $r \geq 2$ is an integer prime to p When q is a power of p and d is a positive integer the authors compute the L function of J over $\mathbb{F}_q(t^{1/d})$ and show that the Birch and Swinnerton Dyer conjecture holds for J over $\mathbb{F}_q(t^{1/d})$

Point-Counting and the Zilber-Pink Conjecture Jonathan Pila, 2022-06-09 Explores the recent spectacular applications of point counting in o minimal structures to functional transcendence and diophantine geometry

Algebraic Geometry. Sundance 1986 Audun Holme, Robert Speiser, 1988-05-25 This proceedings volume centers on new developments in rational homotopy and on their influence on algebra and algebraic topology Most of the papers are original research papers dealing with rational homotopy and tame homotopy cyclic homology Moore conjectures on the exponents of the homotopy groups of a finite CW c complex and homology of loop spaces Of particular interest for specialists are papers on construction of the minimal model in tame theory and computation of the Lusternik Schnirelmann category by means articles on Moore conjectures on tame homotopy and on the properties of Poincar series of loop spaces

Rational Points on Varieties Bjorn Poonen, 2023-08-10 This book is motivated by the problem of determining the set of rational points on a variety but its true goal is to equip readers with a broad range of tools essential for current research in algebraic geometry and number theory The book is unconventional in that it provides concise accounts of many topics instead of a comprehensive account of just one this is intentionally designed to bring readers up to speed rapidly Among the topics included are Brauer groups faithfully flat descent algebraic groups torsors tale and fppf cohomology the Weil conjectures and the Brauer Manin and descent obstructions A final chapter applies all these to study the arithmetic of surfaces The down to earth explanations and the over 100 exercises make the book suitable for use as a graduate level textbook but even experts will appreciate having a single source covering many aspects of geometry over an unrestricted ground field and containing some material that cannot be found elsewhere The origins of arithmetic or Diophantine geometry can be traced back to antiquity and it remains a lively and wide research domain up to our days The book by Bjorn Poonen a leading expert in the field opens doors to this vast field for many readers with different experiences and backgrounds It leads through various algebraic geometric constructions

towards its central subject obstructions to existence of rational points Yuri Manin Max Planck Institute Bonn It is clear that my mathematical life would have been very different if a book like this had been around at the time I was a student Hendrik Lenstra University Leiden Understanding rational points on arbitrary algebraic varieties is the ultimate challenge We have conjectures but few results Poonen's book with its mixture of basic constructions and openings into current research will attract new generations to the Queen of Mathematics Jean Louis Colliot Thélène Université Paris Sud A beautiful subject handled by a master Joseph Silverman Brown University

Handbook of Mathematics Thierry Vialar, 2016-12-07 The book consists of XI Parts and 28 Chapters covering all areas of mathematics It is a tool for students scientists engineers students of many disciplines teachers professionals writers and also for a general reader with an interest in mathematics and in science It provides a wide range of mathematical concepts definitions propositions theorems proofs examples and numerous illustrations The difficulty level can vary depending on chapters and sustained attention will be required for some The structure and list of Parts are quite classical I Foundations of Mathematics II Algebra III Number Theory IV Geometry V Analytic Geometry VI Topology VII Algebraic Topology VIII Analysis IX Category Theory X Probability and Statistics XI Applied Mathematics Appendices provide useful lists of symbols and tables for ready reference The publisher's hope is that this book slightly revised and in a convenient format will serve the needs of readers be it for study teaching exploration work or research

Algebraic Geometry and Commutative Algebra Hiroaki Hijikata, 1988 *Algebraic Geometry and Commutative Algebra* *Hodge Cycles, Motives, and Shimura Varieties* Pierre Deligne, 1982 This volume collects six related articles The first is the notes written by J S Milne of a major part of the seminar *Periodes des Intégrales Abéliennes* given by P Deligne at I B E S 1978-79 The second article was written for this volume by P Deligne and J S Milne and is largely based on N Saavedra Rivano *Catégories tannakiennes* *Lecture Notes in Math* 265 Springer Heidelberg 1972 The third article is a slight expansion of part of J S Milne and Kuang-yen Shih *Shimura varieties conjugates and the action of complex conjugation* 154 pp Unpublished manuscript October 1979 The fourth article is based on a letter from P Deligne to R Langlands dated 10th April 1979 and was revised and completed by Deligne in July 1981 The fifth article is a slight revision of another section of the manuscript of Milne and Shih referred to above The sixth article by A Ogus dates from July 1980

Commutative Algebra, Algebraic Geometry, and Computational Methods David Eisenbud, 1999-07 This volume contains papers presented at the International Conference on Commutative Algebra Algebraic geometry and Computational methods held in Hanoi in 1996 as well as papers written subsequently It features both expository articles as well as research papers on a range of currently active areas in commutative algebra algebraic geometry particularly surveys on intersection theory and combinatorics In addition a special feature is a section on the life and work of Wolfgang Vogel who was an organiser of the conference
