Programmers Larus, 1989 CURARE the program restructurer described in this dessertation autmatically transforms a sequential Lisp program into an equivalent concurrent program that executes on a multiprocessor CURARE first analyzes a program to find its control and data dependences This analysis is most difficult for references to structures connected by pointers CURARE uses a new data dependence algorithm which finds and classifies these dependencies The a nalysis is conservative and may detect conflicts that do not arise in practice A programmer can temper adn refine its results with declarations Dependences constrain the program s concurrent execution because in general two conflicting statements cannot execute in a different order without affecting the program s result A restructerer must know all dependences in order to preserve them Howeve r not all dependences are essential to produce the program s result CURARE attempts to transform the program so it

computes its result with fewer conflicts An optimized program will execute with less synchronization and more concurrency CURARE then examines loops in a program to find those that are unconstrained or lightly constrained by dependences By necessity CURARE treats recursive functions as loops and does not limit itself to explicit program loops Recursive functions offer se veral advantages over explicit loops since they provide a convenient framework for inserting locks and handling the dynamic behaviour of symbolic programs Loops that are suitable for concurrent execution are changed to execute on a set of concurrent serv er processes These servers execute single loop iterations and therefore need to be extremely inexpensive to invoke Restructured programs execute significantly faster than the original sequential programs This improvement is large enough to attract programmers to a multiprocessor particularly since it requires little effort on their part Although restructured program may not make optimal use of a multiprocessor s parallelism they make good use of a programmer s time
