Strategic Risk, Intelligence And Digital Transformation Eduardo Rodriguez, 2024-03-19 In this book the study of strategic risk is not only for its control and mitigation using analytics and digital transformation in organizations but also it is about the strategic risks that digital transformation can bring to organizations Strategic risk control is one of the goals in creating intelligent organizations and at the same time it is part of the appetite for creating smarter organizations to support organizations development Knowledge that is created by data analytics and the capacity to operationalize that knowledge through digital transformation can produce potential sustainable competitive advantages The core of the volume is connecting data analytics and artificial intelligence risk management and digitalization to create strategic intelligence as the capacity of adaptation that organizations need to compete and to succeed Strategic intelligence is a symbiotic work of artificial intelligence business intelligence and competitive intelligence Strategic risk is represented by the probability of having variations in the performance results of the organizations that can limit their capacity to maintain sustainable competitive advantages There is

an emphasis in the book about the conversion of models that support data analytics into actions to mitigate strategic risk based on digital transformation This book reviews the steps that organizations have taken in using technology that connects the data analytics modeling process and digital operations such as the shift from the use of statistical learning and machine learning for data analytics to the improvement and use of new technologies The digitalization process is a potential opportunity for organizations however the results are not necessarily good for everyone Hence organizations implement strategic risk control in cloud computing blockchain artificial intelligence and create digital networks that are connected internally and externally to deal with internal and external customers with suppliers and buyers and with competitors and substitutes The new risks appear once new knowledge emerges and is in use but at the same time the new knowledge supports the initiatives to deal with risks arising from novel ways of competing and collaborating

Proceedings of the 15th International Conference on Applied Human Factors and Ergonomics and the Affiliated Conferences Nice France 24 27 July 2024 **The Response of Microalgae and Plankton to Climate Change and Human Activities**

Zhaohe Luo, Yanpei Zhuang, Kieng Soon Hii, Hala F. Mohamed, 2024-02-07 The majority of global seafood production and mariculture activities take place in marine coastal water bodies especially in areas of high primary productivity from microalgae and plankton This productivity sustains many forms of ecosystem services and promotes carbon dioxide absorption However climate change ocean warming acidification oxygen loss etc and anthropogenic disturbances nutrients intrusion aquaculture have influenced the microalgae plankton community assemblage and shifted it into a highly productive zone causing a severe impact on the marine ecosystem such as an increase in Harmful Algal Blooms dead zone expansions and coral algal phase shifts So far there is still little knowledge on the mechanisms of microalgae plankton community response to these changing environmental conditions Harmful microalgae impair the marine ecosystem through the production of the so called shellfish toxins which cause shellfish contamination and poisoning to the vertebrates including humans In addition some microalgae produce fish killing toxins ichthyotoxins causing increasing damage to marine aquaculture Besides that the high productivity bloom of microalgae in the water due to coastal eutrophication from anthropogenic activities is known to induce hypoxic anoxic conditions causing a severe economic impact on aquaculture
