The Programming and Proof System ATES Armand Puccetti,1991 Today people use a large number of systems ranging in complexity from washing machines to international airline reservation systems Computers are used in nearly all such systems accuracy and security are becoming increasingly essential The design of such computer systems should make use of development methods as systematic as those used in other engineering disciplines A systematic development method must provide a way of writing specifications which are both precise and concise it must also supply a way of relating design to specification A concise specification can be achieved by restricting attention to what a system has to do all considerations of implementation details are postponed With computer systems this is done by 1 building an abstract model of the system operations being specified by pre and post conditions 2 defining languages by mapping program texts onto some collection of objects modelizing the concepts of the system to be dealt with whose meaning is understood 3 defining complex data objects in terms of abstractions known from mathematics This last topic the use of abstract data types pervades all work on specifications and is necessary in order to apply ideas to systems of significant complexity The use of mathematics based notations is the best way to achieve precision 1 1 ABSTRACT DATA TYPES PROOF TECHNIQUES From a practical point of view a solution to these three problems consists to introduce abstract data types in the programming languages and to consider formal proof methods Tutorial, Programming Language Design Anthony I. Wasserman,1980 Presents programming language design and recent advances in the field **Government Reports Index** ,1975 Government Reports Annual Index ,1979 Microprocessors & Microcomputers J. T. Cain,1984 **Journal A.** ,1980 **Readings in Artificial Intelligence and Software Engineering** Charles Rich,Richard C. Waters,1986 Readings in Artificial Intelligence and Software Engineering covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has been designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example

system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable CIPS Session '78 ,1978 Proceedings ,1978 **Computer Sciences Technical Report** ,1978 **Object-oriented Software Construction** Bertrand Meyer,1997 This volume aims to study how practicing software developers in industrial as well as academic environments can use object technology to improve the quality of the software they produce It includes topics on concurrency and Internet programming

Conference Record of the Fifth Annual ACM Symposium on Principles of Programming Languages ,1978

Object Oriented Computer Systems Engineering Derrick Morris,Peter Green,Colin Theaker,1996-03-29 This is the first book to concentrate on hardware and software co design The authors focus on applied development issues addressing the problems associated with the design and development of computer based systems and covering the types of systems that include customised hardware and software components such as embedded systems The book is unique in its coverage of the use of object oriented techniques for representing designs The authors present a specific methodology Model Based Object Oriented systems Engineering MOOSE which enables systems designs to be represented analysed and developed through to an implementation Readers will find many practical examples throughout the book to illustrate the concepts and techniques involved **Selected Reprints in Software** Marvin V. Zelkowitz,1980 While the computer hardware is a physical reality software is hard to describe It cannot be touched tasted or seen but it must be built and maintained It ages becomes obsolete and often breaks but not in the sense that a transistor or a disk drive fails It is this realization that separates the current view of software from that of 30 years ago What is software The Computer articles reprinted in this volume explore some of the answers to that question The articles selected address four topics programming languages software creation data bases and applications
