development of man is vitally dependent on invention It is the most important product of his creative brain Its ultimate purpose is the complete mastery of mind over the material world the harnessing of the forces of nature to human needs This is the difficult task of the inventor who is often misunderstood and unrewarded But he finds ample compensation in the pleasing exercises of his powers and in the knowledge of being one of that exceptionally privileged class without whom the race would have long ago perished in the bitter struggle against pitiless elements Speaking for myself I have already had more than my full measure of this exquisite enjoyment so much that for many years my life was little short of continuous rapture I am credited with being one of the hardest workers and perhaps I am if thought is the equivalent of labor for I have devoted to it almost all of my waking hours But if work is interpreted to be a definite performance in a specified time according to a rigid rule then I may be the worst of idlers Every effort under compulsion demands a sacrifice of life energy I never paid such a price On the contrary I have thrived on my thoughts In attempting to give a connected and faithful account of my activities in this series of articles which will be presented with the assistance of the Editors of the Electrical Experimenter and are chiefly addressed to our young men readers I must dwell however reluctantly on the impressions of my youth and the circumstances and events which have been instrumental in determining my career Our first endeavors are purely instinctive promptings of an imagination vivid and undisciplined As we grow older reason asserts itself and we become more and more systematic and designing But those early impulses although not immediately productive are of the greatest moment and may shape our very destinies Indeed I feel now that had I understood and cultivated instead of suppressing them I would have added substantial value to my bequest to the world But not until I had attained manhood did I realize that I was an inventor

story of that war the people who fought it and the ways in which both kinds of electric power changed the world
