**Abstract**

1998

**Abstract**—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was a randomized, controlled trial. The subjects were 20 obese women who were randomly assigned to either a diet or an exercise group. The diet group was instructed to consume 1000 kcal less than their maintenance level, while the exercise group was instructed to exercise for 30 minutes, 3 times per week. The subjects were assessed at baseline and at 10 weeks. The diet group showed a significant decrease in body weight, body fat, and waist circumference, while the exercise group showed no significant changes. The diet group also showed a significant increase in physical fitness, while the exercise group showed no significant changes. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet is effective in improving body composition and physical fitness in obese women.
