Intermolecular Forces And Liquids And Solids

Raymond Chang

Intermolecular Forces And Liquids And Solids:

Gases, Liquids and Solids David Tabor, 1991-11-14 This is now the third edition of a well established and highly successful undergraduate text The content of the second edition has been reworked and added to where necessary and completely new material has also been included There are new sections on amorphous solids and liquid crystals and completely new chapters on colloids and polymers Using unsophisticated mathematics and simple models Professor Tabor leads the reader skilfully and systematically from the basic physics of interatomic and intermolecular forces temperature heat and thermodynamics to a coherent understanding of the bulk properties of gases liquids and solids The introductory material on intermolecular forces and on heat and thermodynamics is followed by several chapters dealing with the properties of ideal and real gases both at an elementary and at a more sophisticated level The mechanical thermal and electrical properties of solids are considered next before an examination of the liquid state The author continues with chapters on colloids and polymers and ends with a discussion of the dielectric and magnetic properties of matter in terms of simple atomic models The abiding theme is that all these macroscopic material properties can be understood as resulting from the competition between thermal energy and intermolecular or interatomic forces This is a lucid textbook which will continue to provide students of physics and chemistry with a comprehensive and integrated view of the properties of matter in all its many fascinating forms

Intermolecular and Surface Forces Jacob N. Israelachvili, 2011-07-22 Intermolecular and Surface Forces describes the role of various intermolecular and interparticle forces in determining the properties of simple systems such as gases liquids and solids with a special focus on more complex colloidal polymeric and biological systems The book provides a thorough foundation in theories and concepts of intermolecular forces allowing researchers and students to recognize which forces are important in any particular system as well as how to control these forces This third edition is expanded into three sections

and contains five new chapters over the previous edition Starts from the basics and builds up to more complex systems Covers all aspects of intermolecular and interparticle forces both at the fundamental and applied levels Multidisciplinary approach bringing together and unifying phenomena from different fields This new edition has an expanded Part III and new chapters on non equilibrium dynamic interactions and tribology friction forces

Chemistry: The Central Science Theodore L. Brown,H. Eugene LeMay Jr.,Bruce E. Bursten,Catherine Murphy,Patrick Woodward,Steven Langford,Daluis Sagatys,Adrian George,2013-10-04 If you think you know the Brown LeMay Bursten Chemistry text think again In response to market request we have created the third Australian edition of the US bestseller Chemistry The Central Science An extensive revision has taken this text to new heights Triple checked for scientific accuracy and consistency this edition is a more seamless and cohesive product yet retains the clarity innovative pedagogy functional problem solving and visuals of the previous version All artwork and images are now consistent in quality across the entire text And with a more traditional and logical organisation of the Organic Chemistry content this comprehensive text is the source of all the information and practice problems students are likely to need for conceptual understanding development of problem solving skills reference and test preparation

Chemical Bonding in Solids and Fluids Marcus Frederick Charles Ladd,1994 Written by a highly regarded scientist and teacher this book examines and discusses the nature of and properties associated with interatomic and intermolecular forces in solids and fluids All discussions feature mathematical treatments accessible to chemistry students Provides stereoscopic diagrams of three dimensional structure covers computer methods where appropriate classifies and discusses solids in terms of bond type considers liquid structure and properties For students in chemistry chemical physics and biochemistry

Cohesion J. S. Rowlinson,2005-06-30 Why does matter stick together Why do gases condense to liquids and liquids to solids This book provides a detailed historical account of how some of the leading scientists of the past three centuries have tried to answer these questions The topic of cohesion and the study of intermolecular forces has been an important component of physical science research for hundreds of years This book is organised into four broad periods of advances in our understanding The first three are associated with Newton Laplace and van der Waals The final section gives an account of the successful use in the twentieth century of quantum mechanics and statistical mechanics to resolve most of the remaining problems The book will be of primary interest to physical chemists and physicists as well as historians of science interested in the historical origins of our modern day understanding of cohesion
