,1984 **Redeeming REDD** Michael I. Brown,2013-06-26 It is now well accepted that deforestation is a key source of greenhouse gas emissions and of climate change with forests representing major sinks for carbon As a result public and private initiatives for reducing emissions from deforestation and forest degradation REDD have been widely endorsed by policy makers A key issue is the feasibility of carbon trading or other incentives to encourage land owners and indigenous people particularly in developing tropical countries to conserve forests rather than to cut them down for agricultural or other development purposes This book presents a major critique of the aims and policies of REDD as currently structured

particularly in terms of their social feasibility It is shown how the claims to be able to reduce greenhouse gas emissions as well as enhance people s livelihoods and biodiversity conservation are unrealistic There is a naive assumption that technical or economic fixes are sufficient for success However the social and governance aspects of REDD and its enhanced version known as REDD are shown to be implausible Instead to enhance REDD s prospects the author provides a roadmap for developing a new social contract that puts people first **Wall Street & Technology** ,1994 **Bank Management** Timothy W.
