Interpolating Cubic Splines Gary D. Knott, 2012-12-06 A spline is a thin flexible strip composed of a material such as bamboo or steel that can be bent to pass through or near given points in the plane or in 3 space in a smooth manner Mechanical engineers and drafting specialists find such physical splines useful in designing and in drawing plans for a wide variety of objects such as for hulls of boats or for the bodies of automobiles where smooth curves need to be specified These days physical splines are largely replaced by computer software that can compute the desired curves with appropriate encouragement The same mathematical ideas used for computing spline curves can be extended to allow us to compute spline surfaces The application of these mathematical ideas is rather widespread Spline functions are central to computer graphics disciplines Spline curves and surfaces are used in computer graphics renderings for both real and imaginary objects Computer aided design CAD systems depend on algorithms for computing spline functions and splines are used in numerical analysis and statistics Thus the construction of movies and computer games travels side by side with the art of automobile design sail construction and architecture and statisticians and applied mathematicians use splines as everyday computational tools often divorced from graphic images

Application of Spline Interpolation Methods to Engineering Problems James B. Cheek, Narayanaswamy Radhakrishnan, Fred T. Tracy, 1971 This paper was prepared to familiarize

practicing scientists and engineers with the cubic spline interpolation technique as a possible tool in curve fitting for computer programs for which more commonly used techniques may be unsuitable or of limited value The spline technique is compared with more common methods specifically piecewise linear and polynomial and examples of applications of the technique to engineering problems are presented
