## **Introduction To Building Technology:**

*Construction Technology* Eric Fleming, 2009-02-12 This new textbook provides a comprehensive introduction to every aspect of the technology of low rise construction. It includes sub structure, site work, setting out and foundations and superstructure, flooring, roofs, finishes, fittings and fixtures. The material here covers the first year course requirement of all courses on which construction technology is taught, no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice, what works and what doesn't, and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. The supporting spreadsheet referred to in the book can be found at this link: [http://www.blackwellpublishing.com/pdf/fleming\\_Fleming\\_spreadsheet.xls](http://www.blackwellpublishing.com/pdf/fleming_Fleming_spreadsheet.xls)

**Basics Building Technology** Bert Bielefeld, 2017 As building construction is becoming increasingly complex, the field of building technology is becoming more and more important. As an intermediary between all parties involved in a construction project, the architect must be able to understand what is involved and to advise his clients. This volume covers the fields of water supply and disposal, electric installations and the energy related subjects, i.e. heating, ventilation and lighting. The compendium combines the successful individual volumes *Room Conditioning* and *Water Cycles* and supplements these with the two hitherto unpublished volumes *Electric Installation* and *Lighting design*. The student and architect are introduced to the basic principles, terms and systems of building technology, installations and equipment.

**Building Construction Handbook** R. Chudley, Roger Greeno, 2006 This 6th edition includes numerous revisions, amendments and additions in line with ongoing practice and legislative changes in building construction. Included are features of construction that are designed to economise and manage the use of fuel energy in buildings and limit the effect on atmospheric pollution.
