Model for the Solution of the Full, Dynamic Equations of Motion for One-dimensional Unsteady Flow in Open Channels and Through Control Structures Delbert D. Franz, Charles S. Melching, 1997 Handbook of Fluid Dynamics Richard W. Johnson, 1998-05-28

This book provides professionals in the field of fluid dynamics with a comprehensive guide and resource. The book balances three traditional areas of fluid mechanics: theoretical, computational, and experimental, and expounds on basic science and engineering techniques. Each chapter introduces a topic, discusses the primary issues related to this subject, outlines approaches taken by experts, and supplies references for further information. Topics discussed include: basic engineering fluid dynamics, classical fluid dynamics, turbulence modeling, reacting flows, multiphase flows, flow and porous media, high Reynolds number asymptotic theories, finite difference method, finite volume method, finite element method, spectral element methods for incompressible flows, experimental methods such as hot wire anemometry, laser Doppler velocimetry, and flow visualization applications such as axial flow compressor and fan aerodynamics, turbomachinery, airfoils and wings, atmospheric flows, and mesoscale oceanic flows. The text enables experts in particular areas to become familiar with useful information from outside their specialization, providing a broad reference for the significant areas within fluid dynamics.

Measurement in Fluid Mechanics Stavros Tavoularis, 2005-10-24

Measurement in Fluid Mechanics is an introductory up to date general reference in experimental fluid mechanics describing both classical and state of the art methods for flow visualization and for measuring flow rate, pressure, velocity, temperature, concentration, and wall shear stress. Particularly suitable as a textbook for graduate and advanced undergraduate courses, Measurement in Fluid Mechanics is also a valuable tool for practicing engineers and applied scientists. This book is written by a single author in a consistent and straightforward style with plenty of clear illustrations, an extensive bibliography, and over 100 suggested exercises. Measurement in Fluid Mechanics also features extensive background materials in system response, measurement uncertainty, signal analysis, optics, fluid mechanical apparatus, and laboratory practices which shield the reader from having to consult with a large number of primary references. Whether for instructional or reference purposes, this book is a valuable tool for the study of fluid mechanics. Stavros Tavoularis has received a Dipl Eng from the National Technical University of Athens, Greece, an M Sc from Virginia Polytechnic Institute and State University, and a Ph D from The Johns Hopkins University. He has been a professor in the Department of Mechanical Engineering at the University of Ottawa since 1980, where he has served terms as the Department Chair and Director of the Ottawa Carleton Institute for Mechanical and Aerospace Engineering. His research interests include turbulence, structure, turbulent diffusion, vortical flows, aerodynamics, biofluid dynamics, nuclear reactor thermal hydraulics, and the development of experimental methods. Professor Tavoularis is a Fellow of the Engineering Institute of Canada, a Fellow of the Canadian Society for Mechanical Engineering, and a recipient of the George S Glinski
