Introduction To Fungi Ksu Faculty:

Microbial Resource Conservation Sushil K. Sharma,Ajit Varma,2018-10-31 This book covers broad areas in the conservation of microorganisms It addresses the short medium and long term preservation of agriculturally important microorganisms as well as culture collections and their roles The respective chapters address topics such as conventional approaches to bacterial fungal and algal preservation as well as methods and strategies for preserving recalcitrant microorganisms Readers will also find the latest insights into the preservation of vesicular arbuscular VA fungi and ecology diversity and conservation of endophytes and entamopathogenic fungi Microbes of animal and dairy origin their preservation and biosafety issues are also explored Microorganisms are the silent and unseen majority of life on Earth and are characterized by a high degree of genetic and metabolic diversity It is well documented that no branch of science or society is unaffected by microbial interventions Researchers have documented microorganisms from such extreme and unique environments as deserts and hydrothermal vents and with specific traits that are currently being exploited in agriculture industry medicine and biotechnological applications Such great potential can only be found in microorganisms The aim of this book the first entirely devoted to the conservation of microorganisms and to regulatory mechanisms for access and benefits sharing as per Biological Diversity BD Act 2002 is to promote awareness of our world s microbial wealth and to introduce readers to strategies and methodologies for the conservation of microorganisms which could ultimately save human life on Earth

Air Pollution Modelling Syuichi Itahashi,2021-08-30 The air pollution problem inevitably accompanies our human activities Severe air pollution situations have been reported especially in emerging countries and satisfying the air quality standards fully remains an underlying issue Today modeling research is one of the more valuable approaches to understanding the behavior of air pollutants and is useful for regulation policy and decision making Such modeling applications range with regard to horizontal grid resolution from a few km local to hundreds of km regional to thousands of km global To foster our current scientific knowledge on modeling potentialities and limitations scientific research related to multi scale air pollution modeling is collected in this book

Microbial Oxidative Enzymes Arti Gupta,Pankaj Kumar,2023-12-31 Microbial oxidative enzymes are in need of today and in the future also Several microbial oxidative enzymes are being used by various sectors like food agriculture medicine detergents leather paper etc Microbial oxidative enzymes are a natural product hence the application of these enzymes is eco friendly Oxidative enzymes from microbes like bacteria and fungi will be helpful in numerous applications including plant soil health management and waste treatments This book will be more informative as well as useful for related industries and end users and will be of great value to those interested in present day research on oxidation reduction enzymes In the coming years this book will be a game changer for the field of oxidative enzyme development and its applications

Mitigating Environmental Stresses for Agricultural Sustainability in Egypt Hassan Awaad,Mohamed Abu-hashim,Abdelazim Negm,2021-02-08 This book focuses on

the soil and environmental resources and how to utilize them under Egyptian conditions to achieve tolerance to environmental abiotic stresses i.e. drought, heat, salt, pollutants and biotic stresses such as disease resistance. Further, it explores ways to increase productivity, improve the quality of field crops and reduce the food gap. The application of modern technologies is an essential mechanism for improving crops' productivity through laser seed technology, mycorrhiza and biotechnology to enhance the yield of genotypes in sustainable farming systems. Therefore, this book discusses fundamental ways to increase productivity under various environmental circumstances. The book reflects the enormous potential held by horizontal expansion in the newly reclaimed lands in Egypt. Tapping that potential depends on developing crops that are highly tolerant to environmental stresses and mitigating the impacts of climate changes around the world to help Egypt and countries with similar weather and water deficits achieve the 2030 sustainability agenda for agriculture. Given its profundity and scope, the book offers a valuable asset for stakeholders, policy planners, decision makers, researchers and scientists in Egypt and worldwide.

Studies in Natural Products Chemistry Atta-ur Rahman, 2025-03-17. Natural products in the plant and animal kingdom offer a huge diversity of chemical structures that are the result of biosynthetic processes that have been modulated over the millennia through genetic effects. With the rapid developments in spectroscopic techniques and accompanying advances in high throughput screening techniques, it has become possible to isolate and then determine the structures and biological activity of natural products rapidly, thus opening up exciting opportunities in the field of new drug development to the pharmaceutical industry. *Studies in Natural Products Chemistry* covers the synthesis or testing and recording of the medicinal properties of natural products, providing cutting edge accounts of the fascinating developments in the isolation, structure elucidation, synthesis, biosynthesis and pharmacology of a diverse array of bioactive natural products. Focuses on the chemistry of bioactive natural products. Contains contributions by leading authorities in the field. Presents sources of new pharmacophores.

Plant-Microbe-Insect Interactions in Ecosystem Management and Agricultural Praxis Gero Benckiser, Krishnamurthy Kumar, Anton Hartmann, Bernd Honermeier, 2019-04-03. Nature's high biomass productivity is based on biological N₂ fixation (BNF) and biodiversity. Benckiser 1997, Benckiser and Schnell 2007. Although N₂ makes up almost 80% of the atmosphere's volume, living organisms need it in only small quantities, presumably due to the paucity of natural ways of transforming this recalcitrant dinitrogen into reactive compounds. N shortage is commonly the most important limiting factor in crop production. The synthesis of ammonium from nitrogen and hydrogen, the Haber-Bosch (H-B) process, invented more than 100 years ago, became the holy grail of synthetic inorganic chemistry and removed the most ubiquitous limit on crop yields. H-B opened the way for the development and adoption of high yielding cultivars for monoculturing by organic and precision farming. With N over fertilization and pesticide application, monoculturing farmers could approach Nature's high biomass productivity by causing side effects. The scientific world is investigating. This eBook presents the complexity the scientific world is facing in understanding the soil-microbe-plant-animal cooperation, the

millions of taxonomically phylogenetically and metabolically diverse above below ground species involved in shaping the ever changing biogeochemical process patterns being of great significance for food production networks and yield stability Because ecosystem management and agricultural praxis are still largely conducted in isolation the aim of this Frontiers eBook is to gather and interconnect plant microbe insect interaction research of various disciplines studied with a broad spectrum of modern physical chemical biochemical and molecular biological agronomical techniques The goal of this Research Topic was to gain a better understanding of microbe plant insect compositions functioning interactions health fitness and productivity
