Machine Learning and Immersive Technologies for User-centered Digital Healthcare Innovation Federico Colecchia, Eleonora Ceccaldi, Daniele Giunchi, Fang Wang, Rui Qin, 2025-06-09 Emerging technologies such as machine learning and immersive technologies including virtual reality and augmented reality hold great potential for driving disruptive healthcare innovation However the adoption of digital technology in healthcare including use of data driven tools in support of clinical decision making and patient facing applications relying on consumer electronic devices is often hindered by issues of user experience trust equitability and fairness There is increasing recognition of a need to facilitate further convergence between the development of emerging technologies and user centered design research for healthcare with a view to achieving a positive impact on patients care professionals and the healthcare system This article collection addresses current development trends relating to user centered digital healthcare innovation based on machine learning and immersive technologies in order to identify opportunities associated with the deployment of new solutions in a range of environments including clinical domestic and educational settings and barriers to the adoption of technology by end users A key aim is to identify opportunities for strengthening interdisciplinary collaboration as well as methods of lowering barriers and overcoming obstacles for the benefit of patients care professionals and the healthcare system Examples of potential outcomes are effective design and use of solutions based on machine learning and immersive technologies to improve user experience strategies to facilitate ethical development of digital technology for healthcare and methods of encouraging adoption of advanced tools developed in line with principles of equitability and fairness Articles should address issues of user centered digital healthcare innovation driven by machine learning and immersive technologies Submissions should ideally be positioned at the intersection of digital technology development with user centered design although contributions more technical in nature as well as user experience studies are also welcome A non exhaustive list of suitable topics and manuscript types is given below Machine learning and or immersive technologies including augmented reality and virtual reality for user centered digital healthcare Clinical decision support systems Patient facing applications Tools for education and training of future medical professionals Potential barriers to adoption of technology issues of user experience trust equitability and fairness in digital healthcare Reviews and contributions discussing the development of intuitive accessible and inclusive digital interfaces All aspects of healthcare that are being or have the potential to be impacted by machine learning and immersive technologies

The Role of Inflammation and Immune Control in Digestive Disease and Therapeutic Approaches Shuai Wang, Liu Changhui, Zhenhua Li, Wenyi Gu, 2025-05-29 Digestive system diseases including

gastroenteritis irritable bowel syndrome Crohn's disease ulcerative colitis hepatitis and pancreatitis present as a common disease that affects millions of people worldwide. The pathogenesis of these diseases remains a complex context involving multiple factors such as genetics, environment, lifestyle, microbiome, and immune system. Recently, multi-omics analysis strategies raised much concern about the proximal and distal cross-talks between immunocytes and tissue-specific cell types. Methods for the diagnosis, treatment, and prognosis of digestive diseases related to immunity such as stem cell therapies, small molecule chemical drugs, biologics, and phytochemicals have been successively developed and applied. However, the specific functions and related mechanisms of immune cells such as T cells, B cells, macrophages, and other immune cells in digestive diseases still need further exploration. Thus, investigating the potential and promising immunomodulatory targets would help us uncover the initiation and development of molecular events of immune disorders in digestive system diseases, which in turn would promote their prevention and treatment. The goal of this Research Topic is to provide a forum to advance research on the comprehensive understanding of immune regulatory mechanisms and the role of abnormal mechanisms in the occurrence and development of digestive diseases, as well as to explore innovative immune-oriented drugs or treatment interventions in the attempt to achieve a beneficial impact on the diagnosis, prevention, therapy, and prognosis of digestive diseases.

Bullet points are as below:

1. The specific functions and clinical significance of immune cells, e.g., T cells, B cells, macrophages, and other immune cells, etc., in digestive diseases.
2. The mechanism of immune cells participate in inflammatory reactions and tissue damage in digestive diseases.
3. The mechanism of regulators affecting the inflammatory response of the digestive system, e.g., nuclear receptor, membrane receptor pathway, etc.
4. The role of small molecules in digestive diseases, e.g., cytokines, chemical factors, anti-inflammatory agents, immune regulatory molecules, etc.
5. Development of novel anti-inflammatory and immunomodulatory drugs for digestive diseases.

Bibliometric studies are outside of the scope of this section and may be rejected or redirected to other journals' sections as appropriate. Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section. Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease such as inflammatory disease are not in scope unless they have a strong focus on the immune system.
