Analysis and Optimization of Sheet Metal Forming Processes Amrut Mulay, Swadesh Kumar Singh, Andrzej Kocanda, 2024-06-13 Analysis and Optimization of Sheet Metal Forming Processes comprehensively covers sheet metal forming from choosing materials tools and the forming method to optimising the entire process through finite element analysis and computer aided engineering Beginning with an introduction to sheet metal forming the book provides a guide to the various techniques used within the industry It provides a discussion of sheet metal properties relevant to forming processes such as ductility formability and strength and analyses how materials should be selected with factors including material properties cost and availability Forming processes including shearing bending deep drawing and stamping are also discussed along with tools such as dies punches and moulds Simulation and modelling are key to optimising the sheet metal forming process including finite element analysis and computer aided engineering Other topics included are quality control design industry applications and future trends The book will be of interest to students and professionals working in the field of sheet metal and metal forming materials science mechanical engineering and metallurgy

Additive Manufacturing Technologies From an Optimization Perspective Kumar, Kaushik, Zindani, Divya, Davim, J. Paulo, 2019-06-28 In this technology driven era conventional manufacturing is increasingly at risk of reaching its limit and a more design driven manufacturing process additive manufacturing might just hold the key to innovation Offering a higher degree of design freedom the optimization and integration of functional features and the manufacturing of small batch sizes additive manufacturing is changing industry as we know it Additive Manufacturing Technologies From an Optimization Perspective is a critical reference source that provides a unified platform for the dissemination of basic and applied knowledge about additive manufacturing It carefully examines how additive manufacturing is increasingly being used in series production giving those in the most varied sectors of industry the opportunity to create a distinctive profile for themselves based on new customer benefits cost saving potential and the ability to meet sustainability goals Highlighting topics such as bio printing tensile strength and cell printing this book is ideally designed for academicians students engineers scientists software developers architects entrepreneurs and medical professionals interested in advancements in next generation manufacturing

Advances in Computational Methods in Manufacturing R. Ganesh Narayanan, Shrikrishna N. Joshi, Uday Shanker Dixit, 2019-10-17 This volume presents a selection of papers from the 2nd International Conference on Computational Methods in Manufacturing ICCMM 2019 The papers cover the recent advances in computational methods for simulating various manufacturing processes like machining laser welding laser bending strip rolling surface characterization and measurement Articles in this volume discuss both the development of new methods and the application and efficacy of existing computational methods in manufacturing sector This volume will be of interest to researchers in both industry and academia working on computational methods in manufacturing
