Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years applications of generative artificial intelligence GAI have found rapidly growing use in medicine science and daily life Large language models LLMs opened up new avenues in particular for education LLMs have been used to create interactive educational content for students stimulate their curiosity generate code explanations and develop assessment questions Additionally LLMs have been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as ChatGPT have been used to generate teaching materials or assessment tasks across different subjects The field's understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers' efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies

Teaching and Learning in the Age of Generative AI Joseph Rene Corbeil, Maria Elena Corbeil, 2025-04-30 Teaching and Learning in the Age of Generative AI explores how educators can effectively harness the potential of artificial intelligence technologies while skillfully navigating its pedagogical technical ethical institutional and societal implications The increasing accessibility of AI technologies among K-12 and higher education students has raised extensive concerns around academic integrity though a deeper lineage of research and development suggests that these tools may be used to

supplement instruction prioritize critical thinking and promote digital literacy Bookended by in depth analyses of the historical and future trajectories of artificial intelligence in education this comprehensive resource provides evidence based strategies for classroom implementation and helpful summaries of common benefits and risks Teaching assistance personalized learning redefined assessments anti bias measures and safeguards against misconduct and privacy infringement are among the wealth of topics addressed in these chapters This book is an ideal text for undergraduate and graduate students of teacher education and curriculum and instruction as well as for higher education teaching faculty school technology coordinators and talent development personnel in training and in service Continuous Auditing with AI in the Public Sector Lourens J. Erasmus, Sezer Bozkus Kahyaoğlu, 2024-09-18 The effectiveness of internal audit activities is important for the sustainability of change in the public sector In this sense the tools and techniques used and the level of competencies of public sector auditors are decisive This book deals with the effects of current technological developments in the public sector on auditing and risk management activities Therefore it is a resource for public internal auditors to create a digital audit strategy based on artificial intelligence AI and blockchain based applications Institutionalisation of their structures is important for public sector internal auditors For this basic requirements future expectations and best practices are explained The digital business model is presented to produce value added audit findings and outputs that guide public internal auditors and all digital era stakeholders This book is a pioneering work based on continuous auditing continuous monitoring approaches using various AI and blockchain based tools and techniques There is nothing more valuable to the success of a public internal auditor than a detailed understanding of the business The important lesson in developing business knowledge especially in the new audit universe emerging with digital transformation is that all auditors must understand that they never finish learning about business processes risks and control points in the digital era They must constantly push themselves to be motivated and learn about the business operations they audit to implement new audit approaches powered by AI In addition to obtaining up to date business information from process owners and stakeholders public auditors responsible for conducting an AI based continuous audit programme should also look inside their departments for a different perspective on business information that impacts continuous audit programme phase details and has the potential to add value It should be noted that the additional source of information begins with your individual audit experience digital skills and qualifications Artificial Intelligence for Smart Health: Learning, Simulation, and Optimization Bing Yao, Nathan Gaw, Hyo Kyung Lee, 2025-03-07 With rapid developments in medical sensing and imaging we now live in an era of data explosion in which large amounts of data are readily available and accessible in the clinical environment The fast growing biomedical and healthcare data provide unprecedented opportunities for data driven scientific knowledge discovery and clinical decision support However it is widely acknowledged that biomedical and healthcare data contain high dimensions large volumes missing values imbalanced classes heterogeneous sources multi modalities and measurement

noises These inherent features pose significant barriers to the translation of data into meaningful clinical actions Thus there arises an urgent and compelling need for the development of innovative machine learning simulation and optimization algorithms to cope with the unique challenges associated with biomedical and healthcare data facilitating the transformation of data into actionable insights for smart health Our Research Topic aims at catalyzing synergies among biomedical informatics machine learning computer simulation operations research systems engineering and other related fields with three specific goals 1 develop cutting edge data driven models to accelerate scientific knowledge discovery in biomedicine from medical and healthcare data collected from laboratory systems imaging systems and medical and sensing devices 2 develop advanced simulation and calibration algorithms to build personalized digital twins by effectively assimilating patient specific medical data with population level computer models facilitating precision medical planning 3 develop innovative optimization algorithms for optimal medical decision making in the face of uncertainty factors conflicting objectives and complex trade offs This Research Topic will offer a timely collection of information to benefit the researchers and practitioners working in the broad fields of biomedical informatics healthcare data analytics medical image processing and health related artificial intelligence By harnessing the potential of machine learning computational simulation and mathematical optimization techniques healthcare professionals can effectively analyze and interpret the vast amount of biomedical data available to them which will ultimately lead to more accurate disease diagnosis personalized treatment plans and improved patient outcomes
