Concepts, Technology and Legislative Framework* Niklas Lohse,2019-12-11 Master s Thesis from the year 2019 in the subject Engineering Aerospace Technology grade 1 5 University of Applied Sciences Wildau language English abstract This Paper will introduce the most developed concept of vertical take off and landing VTOL aircrafts and assess them It will also analyse the key technology challenges and the legislative situation The world s population is growing and people continue to move from rural to urban areas This is accompanied by an increasing number of cars As a result of this traffic jams in densely populated areas and long commutes are becoming omnipresent Extension possibilities for existing infrastructure especially within urban areas are very limited due to space Consequently innovative alternatives are required Flying cars also known as vertical take off and landing VTOL aircraft still appear to be a future vision which seems to be far away However to date more than 200 of such concepts around the world are being developed some of which are even performing flight tests The objective of this Master s Thesis therefore is to evaluate if flying cars have a realistic potential to improve the overloaded ground infrastructure systems on a mid term ten years basis In order to answer the research question a conceptual examination and subsequent classification of the existing concepts is conducted Based on this a profound content analysis of the four most mature aircraft is carried out As a result three significant technical challenges emerge batteries noise pollution and the autonomous flying capability By performing another content analysis on these obstacles their respective relevance and impact following an upcoming vehicle certification is investigated Furthermore VTOL aircraft operations would require legislative amendments Hence the current legal situations and actual activities in those regions are studied where the four companies with the most mature concepts are based On that basis it can be concluded that flying cars have a huge potential to relieve the overstressed infrastructure systems on the ground Although more than ten years will be required to significantly improve this situation the first flying cars will most likely be visible much sooner Technical as well as legal challenges exist but are not insurmountable and especially the latter are relatively well developed already to enable VTOL operations in an urban environment in the near future **Microprocessors and Interfacing Techniques** Swapneel Chandrakant Mhatre,2014-01-04 The book is written

as per the syllabus of the subject Microprocessors and Interfacing Techniques for S E Computer Engineering Semester II of University of Pune It focuses on the three main parts in the study of microprocessors the architecture the programming and the system design The 8086 microprocessor is described in detail along with glimpses of 8088 80186 and 80188 microprocessors The various peripheral controllers for 8086 88 are also discussed Other topics that are related to the syllabus but not explicitly mentioned are included in the appendices Key Features Programs are given and the related theory is discussed within the same section thereby maintaining a smooth flow and also eliminating the need for a separate section on the practical experiments for the subject of Microprocessors and Interfacing Laboratory Both DOS based programs as well as kit programs are given Algorithms and flowcharts are given before DOS based programs for easy understanding of the program logic
