

VI Gnomonic Expansion and the Creation of Spirals

"There are certain things," said Aristotle, "which suffer no alteration save in magnitude when they grow . . ." He was referring here to the phenomenon the Greek mathematicians called the *gnomon* and the type of growth based upon it, known as gnomonic expansion. Hero of Alexandria defined it as follows: "A gnomon is any figure which, when added to an original figure, leaves the resultant figure similar to the original." The contemplation of this figure leads to an understanding of one of nature's most common forms of growth, growth by accretion or accumulative increase, in which the old form is contained within the new. This is the way the more permanent tissues of the animal body, such as bones, teeth, horns and shells, develop, in contrast to the soft tissue which is discarded and replaced.

This familiar kind of growth has often been presented architecturally as the design theme of a building. The Hindu temple is an excellent example of this. The floor was begun by placing together four bricks, each one foot square, forming thus the square of 2, then expanding this platform to the square of 3 and so forth. Each sequential expansion was considered as an expansion of the altar of sacrifice, in that the whole temple recapitulated its essence—seed, the altar, or original square. Thus the building itself expressed the meaning of "sacrifice," which implies a reduction to that which is sacred. Both in plan and in volume the typical Hindu temple displays the kind of gnomonic growth most obviously displayed in seashells, where the residues of the previous stages of growth remain clearly indicated as part of the structure and design of the subsequent stages.

This method of figuring the gnomon shows its relationship to the Pythagorean formula $a^2 + b^2 = c^2$. Shown here is the gnomonic increase from the square surface area of 4 to the square of 5, where the gnomon of the larger square 5 is equal to 1/4 of the initial square of 4.

The floor plan of the typical Hindu temple is a simple, concentric gnomonic expansion of an initial square. As the mandala reflects the celestial order, each square contains the name of a deity.

The gnomonic expansion or increase depicted in various geometric figures, and by unity dots in the form of square, rectangle, triangle.
