Natural and Synthetic Waxes Ernst J. Krendlinger, Uwe H. Wolfmeier, 2022-10-31 Natural and Synthetic Waxes A compilation of all relevant information for the production and use of waxes in technical applications Waxes are among the oldest organic substances used by mankind Before all others beeswax is known to have played a role in human history for thousands of years But over time many other wax species have been detected and exploited and prepared for different utilizations Today we possess knowledge of a great variety of different types of waxes Unfortunately there still is no broadly accepted definition of a wax for the relatively few wax chemists waxes are usually defined by their physico chemical properties more than by their chemical constitution Waxes are not uniform but oligomeric and polymeric substances not simply describable with a chemical formula The realm of waxes encompasses fully or partly natural refined partly or fully synthetic products which can be extended by wax like products which do not fulfil all definition criteria Waxes are offered in different forms like pellets granules powders or micropowders Their number of technical applications runs into thousands However waxes in most cases are just adjuvants or additives and with few exceptions like candles not known to a broader public Only few publications over the last decades tried to present a more comprehensive overview of their chemistry chemical composition their physical and analytical properties their applications and their sometimes astonishing history Based on personal experience and expertise the authors intend to present an overview on the main classes of waxes their origin history future and potential fate Economical aspects like market size and development ecological impacts and challenges and regulatory issues are also addressed Waxes are indispensable products in everyday life and in industry and technology though mostly not even visible or distinguishable to experts They deserve more than the role of a poor cousin in chemistry and technology **Annual Report - Sasol Limited** Sasol (Firm), 1992 The Assault on the Rand Barry Sergeant, 2013-08-01 When the rand collapsed from 7 60 to 13 84 to the US dollar in 2001 Kevin Wakeford blew the whistle accusing three big corporates and one global bank of being party to manipulation in the currency markets Wakeford predicted that the rand was on its way to 20 30 40 and possibly 50 to the dollar which would have thrown the seven year old democracy into economic and political turmoil As a result of his intervention a Rand Commission was set up by President Mbeki to investigate his claims and the rand s collapse was arrested and reversed The Rand Commission was however shut down prematurely and Wakeford was fired as CEO of the South African Chamber of Business While the Enron and WorldCom scandals in the United States triggered comprehensive corporate reform it seemed that South African authorities were determined to cover up any wrongdoing In The Assault on the Rand Barry Sergeant tells the explosive story of the rand s

collapse and the events that followed He also explores more recent banking scandals around the world giving a hard hitting expos of greed collusion and manipulation in the markets **Bituminous Mixtures and Pavements VI A.**

Diefenderfer,2007 Several processes have been developed to reduce the mixing and compaction temperatures of hot mix asphalt HMA without sacrificing the quality of the resulting pavement The purpose of this study was to evaluate the installation of warm mix asphalt WMA to compile experiences and offer recommendations for future use Three trial sections were installed using warm mix technologies between August and November of 2006 Two used the Sasobit technology and the

third employed the Evotherm technology This report discusses the material makeup of these technologies and documents the production and placement of the three trial sections The results of this study and further studies can serve as a basis for decision making by the Virginia Department of Transportation VDOT regarding the use of WMA technology Trial sections were initiated through cooperative efforts by the Virginia Transportation Research Council VDOT districts residencies and area headquarters and participating contractors Construction used typical mixture designs and practices so that performance under typical construction conditions could be evaluated General experiences and processes used during construction were documented and samples were taken for laboratory characterization Density measurements and cores were taken at each site to determine the initial pavement properties At the Evotherm installation asphalt fume sampling was conducted by VDOT s Employee Safety Health Division to evaluate differences in worker exposure between HMA and WMA pavement laydown operations The study showed that WMA can be successfully placed using conventional HMA paving practices and procedures with only minor modifications to account for the reduction in temperature The evaluated technologies affected mixture properties in slightly different ways such as changes in tensile strength ratios and variability in air voids Additional monitoring of constructed sections was recommended to evaluate long term performance Inclusion of WMA technology as an option for paving operations provides potential benefits to VDOT and the contracting community Theoretically these technologies could extend the asphalt paving season into cooler weather allowing for better optimization of paving resources The technologies also allow the construction of asphalt pavements at lower temperatures resulting in reduced cooling time before the pavement is opened to traffic Lower production temperatures may also increase mixture durability by reducing production aging of the mix Benefits to contractors may include the ability to increase hauling distances between the plant and project reduced plant emissions resulting in improved air quality and cost savings because of reduced energy costs Because of the experimental nature of this study no cost savings data are yet available to justify or refute the use of WMA technologies
