## Reproducing Kernel Hilbert Spaces In Probability And Statistics:

*Reproducing Kernel Hilbert Spaces in Probability and Statistics* Alain Berline, Christine Thomas-Agnan, 2011-06-28 The reproducing kernel Hilbert space construction is a bijection or transform theory which associates a positive definite kernel gaussian processes with a Hilbert space of functions. Like all transform theories, it thinks Fourier problems in one space may become transparent in the other and optimal solutions in one space are often usefully optimal in the other. The theory was born in complex function theory, abstracted and then accidentally injected into Statistics by Manny Parzen as a graduate student at Berkeley was given a strip of paper containing his qualifying exam problem. It read: reproducing kernel Hilbert space. In the 1950s this was a truly obscure topic. Parzen tracked it down and internalized the subject. Soon after he applied it to problems with the following flavor: consider estimating the mean functions of a Gaussian process. The mean functions which cannot be distinguished with probability one are precisely the functions in the Hilbert space associated to the covariance kernel of the processes. Parzen's own lively account of his work on reproducing kernels is charmingly told in his interview with H. Joseph Newton in *Statistical Science* 17 (2002) p. 364-366. Parzen moved to Stanford and his infectious enthusiasm caught Jerry Sacks, Don Ylvisaker, and Grace Wahba among others. Sacks and Ylvisaker applied the ideas to design problems such as the following: Suppose  $X \in \mathcal{H}$  is a random element of a reproducing kernel Hilbert space  $\mathcal{H}$  with covariance kernel  $k$ . Let  $f \in \mathcal{H}$  and let  $Y = \langle X, f \rangle$ . Suppose  $Y$  is observed. What is the best linear predictor of  $f(X)$  based on  $Y$ ? The answer is  $\langle f, f \rangle k(x, x)$ . This is a beautiful result. The theory is beautiful. The book is beautiful. **Reproducing Kernel Hilbert Spaces in Probability and Statistics** Alain Berline, Christine Thomas-Agnan, 2011-06-28

Engineering or to scientists with an equivalent level

Detection of Random Signals in Dependent Gaussian Noise Antonio F. Gualtierotti, 2015-12-15 The book presents the necessary mathematical basis to obtain and rigorously use likelihoods for detection problems with Gaussian noise To facilitate comprehension the text is divided into three broad areas reproducing kernel Hilbert spaces Cramér-Hida representations and stochastic calculus for which a somewhat different approach was used than in their usual stand alone context One main applicable result of the book involves arriving at a general solution to the canonical detection problem for active sonar in a reverberation limited environment Nonetheless the general problems dealt with in the text also provide a useful framework for discussing other current research areas such as wavelet decompositions neural networks and higher order spectral analysis The structure of the book with the exposition presenting as many details as necessary was chosen to serve both those readers who are chiefly interested in the results and those who want to learn the material from scratch Hence the text will be useful for graduate students and researchers alike in the fields of engineering mathematics and statistics

Advanced Topics in Mathematical Analysis Michael Ruzhansky, Hemen Dutta, 2019-01-08 Advanced Topics in Mathematical Analysis is aimed at researchers graduate students and educators with

Zhao,2006-10-11 Face recognition has been actively studied over the past decade and continues to be a big research challenge Just recently researchers have begun to investigate face recognition under unconstrained conditions Unconstrained Face Recognition provides a comprehensive review of this biometric especially face recognition from video assembling a collection of novel approaches that are able to recognize human faces under various unconstrained situations The underlying basis of these approaches is that unlike conventional face recognition algorithms they exploit the inherent characteristics of the unconstrained situation and thus improve the recognition performance when compared with conventional algorithms Unconstrained Face Recognition is structured to meet the needs of a professional audience of researchers and practitioners in industry This volume is also suitable for advanced level students in computer science
