Research Methodology: A Step-By-Step Guide For Beginners Dr. Ravindra Kumar, Dr. S. Parvathy, Dr. Uma Rajmohan, Dr. Pushpa Sharma, 2023-05-18 Research in its broadest sense may be thought of as the process of systematically collecting and analyzing data to gain a deeper understanding of a topic The research employs methodical approaches to address theoretical and applied concerns Studiously inquiring or examining investigating or experimenting to discover interpret facts revise the accepted theories or laws in light of the new facts or put such new or revised theories or laws into practical application is how the Oxford English Dictionary defines research Some individuals see research as a progression one that moves from the familiar to the unfamiliar Inquisitiveness is a fundamental human trait since it compels us to wonder and investigate to get a deeper and deeper grasp of the world around us Curiosity is the seed from which all knowledge grows and the process by which humans learn about the world is what we call study The word research must be used in a specialized context since it refers to a scholarly endeavour Therefore research is the original addition to the body of knowledge that contributes to its development Science is the methodical investigation of the world via the use of analogy comparison and experiment Research in a nutshell is the pursuit of answers to questions via the use of a methodical objective process Research also includes the methodical process of drawing broad conclusions and developing a hypothesis

From contextualization to universalization: Accelerating the knowledge production lifecycle for theoretical sciences in the twenty-first century Sujay Rao Mandavilli,2025-11-23 A great deal of literature has indeed been published about the research lifecycle in modern and contemporary times particularly over the past couple of decades beginning from the 1980 s or so it also goes without saying that the quantum of such output has been greatly amplified since the dawn of the twenty first likewise a great deal has also been written about product development lifecycles and technology lifecycles and all these concepts have been approached from multiple points of view and from multiple perspectives However we consider all these to be highly inadequate and grossly deficient on two grounds because they do not cover the end to end process from contextualization of knowledge to communication and universalization or ubiquitization of knowledge but they are also innately and inherently biased towards commercializable products and practical technology not the knowledge creation process itself which is so essential to the escalation of scientific and cultural activity They must also be naturally be branded as Eurocentric given the fact that much of the knowledge production processes particularly in the social sciences have been centered around the western hemisphere with minimal to no tangible outputs from other parts of the world This is because the west has thus far ruled the roost in theoretical and conceptual knowledge in all facets of human knowledge but particularly in various fields of what people consider to be the social sciences It is there highly naturally and highly obvious that multiple data sets were not adequately considered or considered at all in the process of theorization or theory formulation and generation *American Book Publishing Record* ,2000
