User-centered Web Development Jonathan Lazar, 2001. Frequently Web sites are designed without considering the needs of the users. As a result, the Web site often fails to fulfill its intended purpose. User Centered Web Development guides readers through the process of designing Web based resources based on the needs of the user. This text will take the reader from the initial idea of developing a Web site through determining the mission of the Web site, collecting the requirements, designing the pages, performing usability testing, and implementing and managing a Web site. Further, large case studies will assist readers in comprehending how these user centered design concepts can be applied to real world settings. The author has shown how to implement his design concepts in three case studies spread throughout the book: a non profit educational Web site and Eastman Kodak.
