SIAM Journal on Scientific Computing ,2007 *Scientific and Technical Aerospace Reports* ,1987 *Business Process Management* Umeshwar Dayal,Johann Eder,Jana Koehler,Hajo A. Reijers,2009-08-27 The BPM Business Process Management Conference series has the ambition to be the premier forum for researchers in the area of process aware information systems. It has a record for attracting contributions in innovative research of the highest quality related to all aspects of business process management including theory frameworks methods techniques architectures and empirical findings. BPM 2009 was the 7th instantiation of this series. It took place in Ulm Germany September 8 10 2009 organized by the Institute of Databases and Information Systems of the University of Ulm. This volume contains 17 contributed research papers and two contributed industrial papers selected from 116 submissions from 31 countries. The thorough reviewing process: each paper was reviewed by three to five Program Committee members was extremely competitive as the acceptance rate of 16% indicates. In addition to the contributed papers these proceedings contain two papers and an outline documenting the invited keynote talks. Furthermore a report is included on the collaboration structure in BPM research derived from an analysis of papers accepted for all past BPM conferences. In conjunction with the main conference nine international workshops took place the day before the conference. These workshops fostered the exchange of fresh ideas and experiences between active BPM researchers and stimulated discussions on new and emerging issues in line with the conference topics. The proceedings with the papers of all workshops will be published in a separate volume of Springer's Lecture Notes in Business Information Processing series.

SIAM Journal on Scientific and Statistical Computing Society for Industrial and Applied Mathematics,1986 Research Methodology in Computer Science Ryhan Ebad,2013 Monitoring, Early Warning and Mitigation of Natural and Engineered Slopes, volume III Wen Nie,Haijun Qiu,Afshin Asadi,2024-08-20 Natural and engineered slopes are widely distributed worldwide including mountain slopes highway slopes mine slopes reservoir dams etc. These slopes could become unstable due to natural factors or human activities causing catastrophic loss of life and infrastructure destruction. Therefore these slopes require constant monitoring to provide early warning and enable mitigation. Advanced monitoring equipment information technology and multidisciplinary interaction theories have created new opportunities and challenges in this discipline. Recently advanced monitoring devices information technologies and multidisciplinary intersection theories have contributed to the monitoring early warning and mitigation of natural and engineered slopes. However effective and efficient monitoring precise early warning low cost and low time consuming remediation and reliable risk assessment remain obstacles. This Research Topic aims to present the most recent innovative advancements and state of the art natural and engineered slope monitoring early warning mitigation and risk assessment.
